Laboratory Results for: ESTCP PED LC34 #TR0272

Dear Mr. Repta:

Enclosed are the results of the sample(s) submitted to our laboratory on August 26, 2011. For your reference, these analyses have been assigned our service request number **R1104782**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7471. You may also contact me via email at KBunker@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Karen Bunker
Project Manager

Client:	Geosyntec Consultants	**Service Request No.:**	R1104782
Project:	ESTCP PED LC34/ TR0272 8/24/11	**Date Received:**	8/26/11
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Three (3) water samples including one (1) Trip Blank were collected by the client on 8/24/11 and were received for analysis at Columbia Analytical Services on 8/26/11 via a national courier The samples were received at a cooler temperature of 4.8°C within the guidelines of 0-6°C. Only 1 vial was received for the RSK-175. The analysis was not affected.

Organic Compounds

Three (3) water samples including one (1) Trip Blank were analyzed for a client specific list of Volatile Organics by Method 8260C. Two (2) samples were also analyzed for Organic Acids by HPLC and GC Method RSK-175.

Initial and Continuing Calibration Criteria was met for all samples for 8260C except for the CCV for the compound Dichlorodifluoromethane which was >20%D (22.3%) on the 8/29/11 analytical run. Any hits for this compound associated with this run should be considered as estimated.

All surrogate recoveries were within acceptance limits.

Site specific QC is included in the report for location LC34-RW0007-038.5-20110824 (CAS #R1104782-001) for Organic Acids. All Matrix Spike (MS) and Matrix Spike Duplicate (MSD) recoveries were within limits. All Relative Percent Difference (RPD) calculations were acceptable. The compounds Acetic and Butyric Acids were spiked too low (<4X the concentration in the sample) to be accurately determined. The recoveries for these compounds are flagged as "#". The Laboratory Control Samples (LCS) and LCS Duplicate recoveries were all within QC limits.

Samples required dilutions in order to bring hits within the calibration range of the standards. For samples with hits above the range, the sample is then repeated at the appropriate dilution for the hit. Subsequent hits on the dilution are flagged as "D". The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

Hits between the Method Reporting Limit (MRL) and Minimum Detection Limit (MDL) are flagged as estimated, "J".

All Volatile Organic samples were analyzed within 7 days from collection, the holding time for unpreserved vials, which are required for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample. Organic Acids were analyzed within the proper holding time.

The Laboratory Method Blanks were free from contamination.

The Primary Standard mix for RSK expired on 8/6/11. The Secondary Standard mix expired on 8/9/11. Both standards have shown little to no degradation over the past year. New standards have been ordered but not yet received.

No other analytical or QC problems were encountered.

Approved by Karen Burcher **Date** 9/14/11

Inorganic Parameters

Two (2) water samples were analyzed for Bromide and Iodide by IC method 300.0, dissolved ICP Metals, TOC by method 9060A, Alkalinity by method SM 2320B, Sulfide by method SM 4500-S2-F and Anions: Chloride, Sulfate and Nitrite and Nitrate by IC method 300.0, The soluble metals were filtered in the laboratory upon receipt of the samples.

All initial and continuing calibration criteria were met for these analyses.

Site QC is included in the report for metals for location LC34-RW0007-038.5-20110824 (CAS #R1104782-002). All Matrix Spike (MS) recoveries were within QC acceptance limits. All Relative Percent Difference (RPD) calculations were acceptable. All Laboratory Control Sample (LCS) recoveries were within QC limits.

All holding times were met for these analyses for all analyses except for Nitrate and Nitrite which were received within approximately 1-2 hours of holding time. The samples were analyzed as soon as possible upon receipt. The data has been flagged as "*' for these analyses.

All Laboratory Method Blanks were free from contamination.

No problems were encountered during the analyses of these samples.

Approved by Karen Burchett **Date** 9/14/11

CASE NARRATIVE

This report contains analytical results for the following samples:
Service Request Number: R1104782

REPORT QUALIFIERS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% (25% for CLP) difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.

Lab Control Sample Summary
Organic Acids in Aqueous Matrices by High Performance Liquid Chromatography (HPLC) 28 Day Hold Time

Analytical Method: Organic Acids

Units: mg/L
Basis: NA

Analysis Lot: 259784

	Lab Control Sample RQ1108668-02			Duplicate Lab Control Sample RQ1108668-03					
Analyte Name	**Result**	**Spike Amount**	**% Rec**	**Result**	**Spike Amount**	**% Rec**	**% Rec Limits**	**RPD**	**RPD Limit**
Pyruvic Acid	1.19	1.00	119	1.17	1.00	117	70 - 130	2	30
Acetic Acid	9.91	10.0	99	9.80	10.0	98	70 - 135	1	30
Butanoic Acid (Butyric Acid)	10.4	10.0	104	10.2	10.0	102	78 - 113	2	30
Lactic Acid	9.42	9.97	94	9.31	9.97	93	61 - 109	1	30
Propionic Acid	9.86	9.97	99	9.72	9.97	98	80 - 125	1	30

Results flagged with an asterisk (*) indicate values outside control criteria.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

September 23, 2011 Service Request No: R1104862

Mr. Cory Repta
GeoSyntec Consultants
130 Research Lane
Suite 2
Guelph, ON N1G 5G3
CANADA

Laboratory Results for: ESTCP PED LC34 TR0272 8/30/11

Dear Mr. Repta:

Enclosed are the results of the sample(s) submitted to our laboratory on September 1, 2011. For your reference, these analyses have been assigned our service request number **R1104862**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7471. You may also contact me via email at KBunker@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

for:
Karen Bunker
Project Manager

Client:	Geosyntec	**Service Request No.:**	R1104862
Project:	ESTCP PED LC34/ TR0272	**Date Received:**	9/1/11
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Two (2) water samples and one (1) Trip Blank were collected by the client on 8/31/11 and were received for analysis at Columbia Analytical Services on 9/1/11 via a national courier The samples were received at a cooler temperature of 3.9°C within the guidelines of 0-6°C.

Organic Compounds

Two (2) water samples and one (1) Trip Blank were analyzed for a client specific list of Volatile Organics by Method 8260C, Organic Acids by HPLC and Method RSK-175 by GC. Samples were merged per client request for reporting.

Initial and Continuing Calibration Criteria was met for all samples for 8260C except the Continuing Calibration Verification (CCV) standard exceeded 20% Difference criteria for Bromomethane and Acetone on the 9/2/11 analytical run. All detected concentrations for these compounds in samples associated with these CCV should be considered as estimated.

All surrogate recoveries were within acceptance limits.

The Laboratory Control Samples (LCS) and LCS Duplicate (RSK & Organic Acids) recoveries were all within QC limits.

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "J", estimated.

Both samples had hits above the calibration range of the standards for Methane. The samples are then repeated at the appropriate dilution for the hit. Subsequent hits on the dilution are flagged as "D". The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

All Volatile Organic samples were initially analyzed within 7 days from collection, the holding time for unpreserved vials, which are required for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample. The RSK-175 samples were analyzed within 14 days of collection for preserved samples. Organic Acids were analyzed within the proper holding time.

The Laboratory Method Blanks were free from contamination.

No other analytical or QC problems were encountered.

Inorganic Parameters

Two (2) water samples were analyzed for Anions: Chloride, Nitrate, Nitrite, Bromide, Iodide and Sulfate by IC method 300.0, dissolved ICP Metals, TOC by method 9060A, Alkalinity by method SM 2320B, Sulfide by method SM 4500-S2-F. The soluble metals were filtered in the laboratory upon receipt of the samples.

Approved by Natten **Date** 9/23/11

All initial and continuing calibration criteria were met for these analyses with the exception of the middle CCV for Nitrate (CCV2) on 9/1/11. All Nitrate samples were repeated outside of the 48 hour method specified holding time and have been flagged with a "*". Both sets of data have been reported.

All Laboratory Control Sample (LCS) recoveries were within QC limits.

Nitrite samples were analyzed at a dilution due to high Chloride concentrations which caused interferences and have been reported with high non-detects.

All Laboratory Method Blanks were free from contamination.

No other problems were encountered during the analyses of these samples.

Approved by _____ **Date** 9/23/11

CASE NARRATIVE

This report contains analytical results for the following samples:

REPORT QUALIFIERS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% (25% for CLP) difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.

October 03, 2011 Service Request No: R1105169

Mr. Cory Repta
GeoSyntec Consultants
130 Research Lane
Suite 2
Guelph, ON N1G 5G3
CANADA

Laboratory Results for: ESTCP PED LC34 9/15/11

Dear Mr. Repta:

Enclosed are the results of the sample(s) submitted to our laboratory on September 16, 2011. For your reference, these analyses have been assigned our service request number **R1105169**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7471. You may also contact me via email at KBunker@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Karen Bunker
Project Manager

Client:	Geosyntec Consultants	**Service Request No.:**	R1105169
Project:	ESTCP PED LC34/ TR0272 9/15/11	**Date Received:**	9/16/11
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Two (2) water samples were collected by the client on 9/15/11 and were received for analysis at Columbia Analytical Services on 9/16/11 via a national courier The samples were received at a cooler temperature of 0.8°C within the guidelines of 0-6°C.

Organic Compounds

Two (2) water samples were analyzed for a client specific list of Volatile Organics by Method 8260C. Two (2) samples were also analyzed for Organic Acids by HPLC and GC Method RSK-175.

Initial and Continuing Calibration Criteria was met for all samples for 8260C.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. The Laboratory Control Samples (LCS) and LCS Duplicate (LSCD) (RSK & Organic Acids) recoveries were all within QC limits. All Relative Percent Difference (RPD) calculations were acceptable.

Samples required dilutions in order to bring hits within the calibration range of the standards. For samples with hits above the range, the sample is then repeated at the appropriate dilution for the hit. Subsequent hits on the dilution are flagged as "D". The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

All Volatile Organic samples were analyzed within 7 days from collection, the holding time for unpreserved vials, which are required for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample. Organic Acids were analyzed within the proper holding time.

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "J", estimated.

The Laboratory Method Blanks were free from contamination.

No other analytical or QC problems were encountered.

Inorganic Parameters

Two (2) water samples were analyzed for Bromide and Iodide by IC method 300.0, dissolved ICP Metals, TOC by method 9060A, Alkalinity by method SM 2320B, Sulfide by method SM 4500-S2-F and Anions: Chloride, Nitrate, Nitrite, and Sulfate by IC method 300.0 The soluble metals were filtered in the laboratory upon receipt of the samples.

All initial and continuing calibration criteria were met for these analyses.

Batch QC is included in the report. All LCS and LCSD (Sulfide) recoveries were within QC limits.

Approved by Karen Beeler **Date** 10/4/11

All samples were initially analyzed within holding times for these analyses. The Nitrite analysis was repeated almost 2 hours outside of the 48 hour holding time due to an interfering Chloride peak on the initial analysis. Only the reanalysis date has been reported. The data has been flagged as "*".

All Laboratory Method Blanks were free from contamination.

No other problems were encountered during the analysis of these samples.

Approved by Karen J Beecher Date 10/4/11

CASE NARRATIVE

This report contains analytical results for the following samples:

REPORT QUALIFIERS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% (25% for CLP) difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.

Cooler Receipt And Preservation Check Form

Project/Client Geosyntec-FL Folder Number R1105169

Cooler received on 9/16/11 by: DPW COURIER: CAS UPS FEDEX VELOCITY CLIENT

1.	Were custody seals on outside of cooler?		YES	(NO)		
2.	Were custody papers properly filled out (ink, signed, etc.)?		(YES)	NO		
3.	Did all bottles arrive in good condition (unbroken)?		(YES)	NO		
4.	Did VOA vials, Alkalinity, or Sulfide have significant* air bubbles?		YES	(NO)	N/A	
5.	Were ~~Ice~~ or ~~Ice packs~~ present?		(YES)	NO		
6.	Where did the bottles originate?		GAS/ROC, CLIENT			
7.	Temperature of cooler(s) upon receipt:	0.8°				
	Is the temperature within 0° - 6° C?:	~~Yes~~	Yes	Yes	Yes	Yes
	If No, Explain Below	No	No	No	No	No

Date/Time Temperatures Taken: 9/16/11 / 0957

Thermometer ID: IR GUN#3 / IR ~~GUN#4~~ Reading From: Temp Blank / Sample Bottle

If out of Temperature, note packing/ice condition, Client Approval to Run Samples: _____

PC Secondary Review: KB 9/16/11

Cooler Breakdown: Date: 9/16/11 Time: 1138 by: DPW

1.	Were all bottle labels complete (*i.e.* analysis, preservation, etc.)?	(YES)	NO
2.	Did all bottle labels and tags agree with custody papers?	(YES)	NO
3.	Were correct containers used for the tests indicated?	(YES)	NO
4.	Air Samples: Cassettes / Tubes Intact Canisters Pressurized Tedlar® Bags Inflated		(~~N/A~~)

Explain any discrepancies: _____

pH	Reagent	YES	NO	Lot Received	Exp	Sample ID	Vol. Added	Lot Added	Final pH
≥12	NaOH			WC1030S1F	2/16				
≤2	HNO_3								
≤2	H_2SO_4			WC1031380	8/12				
Residual Chlorine (-)	For TCN and Phenol			If present, contact PM to add ascorbic acid					
	$Na_2S_2O_3$	-	-						
	Zn Aceta	-	-	WC1030980	5/12				
	HCl	*	*	4110020	7/12				

*Not to be tested before analysis – pH tested and recorded by VOAs or GenChem on a separate worksheet

Yes = All samples OK

No = Samples were preserved at lab as listed

PM OK to Adjust: _____

Laboratory Results for: LC34 ESTCP PED TR0272

Dear Mr. Repta:

Enclosed are the results of the sample(s) submitted to our laboratory on September 29, 2011. For your reference, these analyses have been assigned our service request number **R1105400**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7471. You may also contact me via email at KBunker@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Karen Bunker
Project Manager

Client:	Geosyntec Consultants	**Service Request No.:**	R1105400
Project:	ESTCP PED LC34/ TR0272 9/28/11	**Date Received:**	9/29/11
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Two (2) water samples and one (1) Trip Blank were collected by the client on 9/28/11 and were received for analysis at Columbia Analytical Services on 9/29/11 via a national courier The samples were received at a cooler temperature of 2.7°C within the guidelines of 0-6°C. Sample vials received from CAS were preserved with HCL. The client triple rinsed the vials prior to sampling.

Organic Compounds

Two (2) water samples and one (1) Trip Blank were analyzed for a client specific list of Volatile Organics by Method 8260C. Two (2) samples were also analyzed for Organic Acids by HPLC and GC Method RSK-175.

Initial and Continuing Calibration Criteria was met for all samples for 8260C.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. The Laboratory Control Samples (LCS) and LCS Duplicate (LSCD), (RSK & Organic Acids) recoveries were all within QC limits. All Relative Percent Difference (RPD) calculations were acceptable.

Samples required dilutions in order to bring hits within the calibration range of the standards. For samples with hits above the range, the sample is then repeated at the appropriate dilution for the hit. The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

All Volatile Organic samples were analyzed within 7 days from collection, the holding time for unpreserved vials, which are required for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample. Organic Acids were analyzed within the proper holding time.

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "I", estimated.

The Laboratory Method Blanks were free from contamination except for Acetone on the 10/4/11 analytical run. No data was affected. The Trip Blank also had low level contamination for Acetone.

No other analytical or QC problems were encountered.

Inorganic Parameters

Two (2) water samples were analyzed for Bromide and Iodide by IC method 300.0, dissolved ICP Metals, TOC by method 9060A, Alkalinity by method SM 2320B, Sulfide by method SM 4500-S2-F and Anions: Chloride, Nitrate, Nitrite, and Sulfate by IC method 300.0 The soluble metals were filtered in the laboratory upon receipt of the samples.

All initial and continuing calibration criteria were met for these analyses.

Batch QC is included in the report. All LCS and LCSD (Sulfide) recoveries were within QC limits.

Approved by Karen Burke **Date** 10/14/11

All samples were analyzed within holding times for these analyses except for Nitrite analysis which were repeated outside of the 48 hour holding time by less than 2 hours due to an interfering Chloride peak on the initial analysis. Only the reanalysis date has been reported. The data has been flagged as "*" for the holding time exceedence.

All Laboratory Method Blanks were free from contamination.

No other problems were encountered during the analysis of these samples.

Approved by Karen Beerbee Date 10/14/11

CASE NARRATIVE

This report contains analytical results for the following samples:
Service Request Number: R1105400

Lab ID	Client ID
R1105400-001	LC34-RW0007-038.5-20110928
R1105400-002	LC34-RW0007-038.5-20110928 Dissolved
R1105400-003	LC34-RW0008-052.0-20110928
R1105400-004	LC34-RW0008-052.0-20110928 Dissolved
R1105400-005	LC34-TB-20110928

Florida DEP Data Qualifiers

B	Results based upon colony counts outside the acceptable range.
D	Measurement was made in the field.
H	Value based on field kit determination; results may not be accurate.
i	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J	Estimated value (one of the following reasons is discussed in the project case narrative). 1. The result may be inaccurate because the surrogate recovery limits have been exceeded. 2. No known quality control criteria exists for the component. 3. The reported value failed to meet the established quality control criteria for either precision or accuracy. 4. The sample matrix interfered with the ability to make any accurate determination (e.g., primary and confirmation results show greater than 40% RPD). 5. The data is questionable because of improper laboratory or field protocols (e.g., GC/MS Tune did not meet method criteria).
K	Off scale low. The value is less than the lowest calibration standard but greater than the method reporting limit (MRL).
L	Off scale high. The analyte is above the upper limit of the linear calibration range.
M	The MDL/MRL has been elevated because the analyte could not be accurately quantified due to matrix interference.
N	Presumptive evidence of the analyte. Confirmation was not performed.
Q	Sample held beyond the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample.
Z	Too many colonies were present (TNTC). The numeric value represents the filtration volume.

Laboratory Results for: ESTCP PED LC34 10/13/11/ TR0272A

Dear Mr. Repta:

Enclosed are the results of the sample(s) submitted to our laboratory on October 14, 2011. For your reference, these analyses have been assigned our service request number **R1105742**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7471. You may also contact me via email at KBunker@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Karen Bunker
Project Manager

Client:	Geosyntec Consultants	**Service Request No.:**	R1105742
Project:	ESTCP PED LC34/ TR0272 10/13/11	**Date Received:**	10/14/11
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Two (2) water samples were collected by the client on 10/13/11 and were received for analysis at Columbia Analytical Services on 10/14/11 via a national courier. The samples were received at a cooler temperature of 2.4°C within the guidelines of 0-6°C.

Organic Compounds

Two (2) water samples were analyzed for a client specific list of Volatile Organics by Method 8260C, Organic Acids by HPLC, and GC Method RSK-175.

Initial and Continuing Calibration Criteria was met for all samples for 8260C except for the %D for Bromomethane which was outside the ±20%D limits at -27.7% on the 10/17/11 analytical run. Any hits for this compound associated with the samples should be considered as estimated.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. The Laboratory Control Samples (LCS) and LCS Duplicate (LSCD), (RSK & Organic Acids) recoveries were all within QC limits. All Relative Percent Difference (RPD) calculations were acceptable.

Samples required dilutions in order to bring hits within the calibration range of the standards. For samples with hits above the range, the sample is then repeated at the appropriate dilution for the hit. The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

The Retention Time (RT) for ethane is within the proper window for this compound however, the peak is off in time relative to methane and ethylene. As a result, ethane results may be slightly biased.

All Volatile Organic samples were analyzed within 7 days from collection, the holding time for unpreserved vials, which are required for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample. Organic Acids were analyzed within the proper holding time.

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "I", estimated.

The Laboratory Method Blanks were free from contamination.

No other analytical or QC problems were encountered.

Batch QC is included in the report. All LCS and LCSD (Sulfide) recoveries were within QC limits.

Approved by Karen Burches **Date** 10/31/11

Inorganic Parameters

Two (2) water samples were analyzed for Bromide and Iodide by IC method 300.0, dissolved ICP Metals, TOC by method 9060A, Alkalinity by method SM 2320B, Sulfide by method SM 4500-S2-F and Anions: Chloride, Nitrate, Nitrite, and Sulfate by IC method 300.0 The soluble metals were filtered in the laboratory upon receipt of the samples.

All initial and continuing calibration criteria were met for these analyses.

All samples were analyzed within holding times for these analyses.

All Laboratory Method Blanks were free from contamination.

No other problems were encountered during the analysis of these samples.

Approved by Karen Burnhee Date 10/31/11

CASE NARRATIVE

This report contains analytical results for the following samples:

REPORT QUALIFIERS

U	Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
J	Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Arclors).
B	Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
E	Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
E	Organics- Concentration has exceeded the calibration range for that specific analysis.
D	Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
*	Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
H	Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
#	Spike was diluted out.
+	Correlation coefficient for MSA is <0.995.
N	Inorganics- Matrix spike recovery was outside laboratory limits.
N	Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
S	Concentration has been determined using Method of Standard Additions (MSA).
W	Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
P	Concentration >40% (25% for CLP) difference between the two GC columns.
C	Confirmed by GC/MS
Q	DoD reports: indicates a pesticide/Aroclor is not confirmed (≥100% Difference between two GC columns).
X	See Case Narrative for discussion.

CANADA

Laboratory Results for: ESTCP PED LC34 TR0272 10/25-27/11

Dear Mr. Repta:

Enclosed are the results of the sample(s) submitted to our laboratory between October 26, 2011 and October 28, 2011. For your reference, these analyses have been assigned our service request number **R1106024**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7471. You may also contact me via email at KBunker@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Karen Bunker
Project Manager

Client:	Geosyntec Consultants	**Service Request No.:**	R1106024
Project:	ESTCP PED LC34/ TR0272 10/25-27/11	**Date Received:**	10/26-28/11
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Thirty-six (36) water samples including three (3) Trip Blanks were collected by the client over the period from 10/25-27/11 and were received for analysis at Columbia Analytical Services from 10/26-28/11 via a national courier The samples were received at a cooler temperature range from 1.2 - 6.0°C within the guidelines of 0-6°C. Any breakage or headspace noted upon sample receipt is noted on the Cooler Receipt and Preservation form immediately following the associated chain of custody near the end of the report.

Volatile Organic Compounds GC/MS

Thirty-six (36) water samples were analyzed for a client specific list of Volatile Organics by Method 8260C.

Initial and Continuing Calibration Criteria was met for all samples except for the Continuing Calibration Verification %D which was outside limits of ±20% for 1,1,2,2-Tetrachloroethane (-20.5%) and Bromomethane (-22.0%) on the 10/29/11analytical run. Any hits in samples associated with these hits should be considered as estimated.

All surrogate recoveries were within acceptance limits.

Site QC is included in the report for locations LC34-BW0001B-031.5-2011025 and LC34-RW0008-052.0-2011026 (CAS #R1106024-005 and -036 respectively). All Matrix Spike (MS) and Matrix Spike Duplicate (MSD) recoveries were within acceptance limits except for the following:

1,1,2-Trichloro-1,2,2-trifluoroethane (MS/MSD) outside limits low
Trichloroethene (MS/MSD) outside limits low
Cis-1,2-Dichloroethene (MS) outside limits low.

Matrix interference is suspected. The Laboratory Control Samples (LCS) and LCS Duplicate (LSCD) recoveries were all within QC limits. All Relative Percent Difference (RPD) calculations were acceptable.

Samples required dilutions in order to bring hits within the calibration range of the standards. For samples with hits above the range, the sample is then repeated at the appropriate dilution for the hit. The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

All Volatile Organic samples were analyzed within 7 days from collection, the holding time for unpreserved vials, which are required for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample.

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "I", estimated.

The Laboratory Method Blanks were free from contamination.

No other analytical or QC problems were encountered.

Approved by Karen Burke Date 11/17/11

Volatile Organics GC

Twenty-five (25) samples were also analyzed for Organic Acids by HPLC and GC Method RSK-175.

Initial and Continuing Calibration Criteria was met for all samples.

All surrogate recoveries were within acceptance limits.

Site QC is included in the report for locations LC34-BW0001C-038.5-2011025 and LC34-BW0003E-052.5-2011027 (CAS # R1106024-007 and -046 respectively) for RSK-175 and locations LC34-IW0076-075.0-2011025, LC34-RW0007-038.5-20111026, and LC34-BW0003C-038.5-20111027 (CAS # R1106024-001,-034 and -045 respectively) for Organic Acids. All Matrix Spike (MS) and Matrix Spike Duplicate (MSD) recoveries were within acceptance limits. Acetic Acid and Butanoic Acid were spiked too low to be accurately determined (less than 4X the concentration in the samples). The recoveries have been flagged as "#". The Laboratory Control Samples (LCS) and LCS Duplicate (LSCD recoveries were all within QC limits except for n-Butanol on the 10/29/11 run which was outside limits high. All Relative Percent Difference (RPD) calculations were acceptable.

Samples required dilutions in order to bring hits within the calibration range of the standards. For samples with hits above the range, the sample is then repeated at the appropriate dilution for the hit. The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

All Volatile Organic samples were analyzed within 7 days from collection, the holding time for unpreserved vials, which are required for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample. Organic Acids were analyzed within the proper holding time.

The Laboratory Method Blanks were free from contamination except for n-Butanol on the 10/29/11 analytical run. Any affected data is flagged as "B".

No other analytical or QC problems were encountered.

Inorganic Parameters

Twenty-four (24) water samples were analyzed for Bromide and Iodide by IC method 300.0 and TOC by method 9060A. Thirteen (13) water samples were analyzed for Alkalinity by method SM 2320B, Sulfide by method SM 4500-S2-F and Anions: Chloride, Nitrate, Nitrite, and Sulfate by IC method 300.0. Twelve (12) water samples were analyzed for dissolved metals by ICP method 6010C. These soluble metals were filtered in the laboratory upon receipt of the samples.

All initial and continuing calibration criteria were met for these analyses.

Site QC is included in the report for all analytes except Sulfide which had insufficient sample volume available for site specific analysis. An LCS and LCSD were done on this parameter. All Matrix Spike (MS) recoveries were within acceptance limits except for Sulfate MS and MSD and Chloride and Iodide MS recoveries which were outside limits low. The recoveries are flagged as "*". Matrix interference is suspected. All Relative Percent Difference (RPD) calculations were acceptable. All LCS and LCSD (Sulfide) recoveries were within QC limits.

All samples were analyzed within holding times for these analyses except for Nitrite analysis which were repeated hours outside of the 48 hour holding time for 11 of the 13 samples due to an interfering Chloride peak on the initial analysis. Only the reanalysis date has been reported. The data has been flagged as "*" for the holding time exceedences. Permission has been given by the client to run future samples by an alternative method to avoid this interference.

All Laboratory Method Blanks were free from contamination.

No other problems were encountered during the analysis of these samples.

Approved by Karen Burnhee **Date** 11/17/11

Florida DEP Data Qualifiers

B	Results based upon colony counts outside the acceptable range.
D	Measurement was made in the field.
H	Value based on field kit determination; results may not be accurate.
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J	Estimated value (one of the following reasons is discussed in the project case narrative). 1. The result may be inaccurate because the surrogate recovery limits have been exceeded. 2. No known quality control criteria exists for the component. 3. The reported value failed to meet the established quality control criteria for either precision or accuracy. 4. The sample matrix interfered with the ability to make any accurate determination (e.g., primary and confirmation results show greater than 40% RPD). 5. The data is questionable because of improper laboratory or field protocols (e.g., GC/MS Tune did not meet method criteria).
K	Off scale low. The value is less than the lowest calibration standard but greater than the method reporting limit (MRL).
L	Off scale high. The analyte is above the upper limit of the linear calibration range.
M	The MDL/MRL has been elevated because the analyte could not be accurately quantified due to matrix interference.
N	Presumptive evidence of the analyte. Confirmation was not performed.
Q	Sample held beyond the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample.
Z	Too many colonies were present (TNTC). The numeric value represents the filtration volume.

Notes:

* Percent *Dehalococcoides* (Dhc) in microbial population. This value is calculated by dividing the number of Dhc 16S ribosomal ribonucleic acid (rRNA) gene copies by the total number of bacteria as estimated by the mass of DNA extracted from the sample. Range represents normal variation in Dhc enumeration.

** Based on quantification of Dhc 16S rRNA gene copies. Dhc are generally reported to contain one 16S rRNA gene copy per cell; therefore, this number is often interpreted to represent the number of Dhc cells present in the sample.

J The associated value is an estimated quantity between the method detection limit and quantitation limit.
U Not detected, associated value is the quantification limit.
B Analyte was also detected in the method blank.
NA Not applicable as *Dehalococcoides* not detected and/or quantifiable DNA not extracted from the sample.
I Sample inhibited the test reaction based on inability to PCR amplify extracted DNA with universal primers.

Laboratory Results for: ESTCP PED LC34 11/10/11

Dear Mr. Repta:

Enclosed are the results of the sample(s) submitted to our laboratory on November 11, 2011. For your reference, these analyses have been assigned our service request number **R1106413**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7471. You may also contact me via email at KBunker@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Karen Bunker
Project Manager

Client:	Geosyntec Consultants	**Service Request No.:**	R1106413
Project:	ESTCP PED LC34/ TR0272 11/10/11	**Date Received:**	11/11/11
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Two (2) water samples were collected by the client on 11/10/11 and were received for analysis at Columbia Analytical Services from 11/10/11 via a national courier The samples were received at a cooler temperature of. 3.4°C within the guidelines of 0-6°C. No bottle breakage or vial headspace was noted upon sample receipt.

Volatile Organic Compounds GC/MS

Two (2) water samples were analyzed for a client specific list of Volatile Organics by Method 8260C.

Initial and Continuing Calibration Criteria was met for all samples.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. The Laboratory Control Samples (LCS) and LCS Duplicate (LSCD) recoveries were all within QC limits. All Relative Percent Difference (RPD) calculations were acceptable.

Samples required dilutions in order to bring hits within the calibration range of the standards. For samples with hits above the range, the sample is then repeated at the appropriate dilution for the hit. The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

All Volatile Organic samples were analyzed within 7 days from collection, the holding time for unpreserved vials, which are required for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample.

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "I", estimated.

The Laboratory Method Blanks were free from contamination.

No other analytical or QC problems were encountered.

Volatile Organics GC

Two (2) samples were analyzed for Organic Acids by HPLC and GC Method RSK-175.

Initial and Continuing Calibration Criteria was met for all samples.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. The Laboratory Control Samples (LCS) and LCS Duplicate (LSCD recoveries were all within QC limit. All Relative Percent Difference (RPD) calculations were acceptable.

Samples required dilutions in order to bring hits within the calibration range of the standards. For samples with hits above the range, the sample is then repeated at the appropriate dilution for the hit. The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

Approved by Trevor Bentley **Date** 12/7/11

All Volatile Organic samples were analyzed within 7 days from collection, the holding time for unpreserved vials, which are required for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample. Organic Acids were analyzed within the proper holding time.

The Laboratory Method Blanks were free from contamination.

No other analytical or QC problems were encountered.

Inorganic Parameters

Two (2) water samples were analyzed for TOC by method 9060A, Alkalinity by method SM 2320B, Sulfide by method SM 4500-S2-F and Bromide, Iodide, Chloride, Nitrate, and Sulfate by IC method 300.0 and Nitrite by method 353.2. Two (2) water samples were analyzed for dissolved metals by ICP method 6010C. These soluble metals were filtered in the laboratory upon receipt of the samples.

All initial and continuing calibration criteria were met for these analyses.

Batch QC is included in the report. All LCS recoveries were within acceptance limits. The LCS and LCSD for Sulfide were within QC limits. The Relative Percent Difference (RPD) calculation was acceptable.

All samples were analyzed within holding times for these analyses.

All Laboratory Method Blanks were free from contamination.

No problems were encountered during the analysis of these samples.

Approved by Karen Burke Date 12/7/11

Florida DEP Data Qualifiers

B	Results based upon colony counts outside the acceptable range.
D	Measurement was made in the field.
H	Value based on field kit determination; results may not be accurate.
i	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J	Estimated value (one of the following reasons is discussed in the project case narrative). 1. The result may be inaccurate because the surrogate recovery limits have been exceeded. 2. No known quality control criteria exists for the component. 3. The reported value failed to meet the established quality control criteria for either precision or accuracy. 4. The sample matrix interfered with the ability to make any accurate determination (e.g., primary and confirmation results show greater than 40% RPD). 5. The data is questionable because of improper laboratory or field protocols (e.g., GC/MS Tune did not meet method criteria).
K	Off scale low. The value is less than the lowest calibration standard but greater than the method reporting limit (MRL).
L	Off scale high. The analyte is above the upper limit of the linear calibration range.
M	The MDL/MRL has been elevated because the analyte could not be accurately quantified due to matrix interference.
N	Presumptive evidence of the analyte. Confirmation was not performed.
Q	Sample held beyond the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample.
Z	Too many colonies were present (TNTC). The numeric value represents the filtration volume.

December 09, 2011 Service Request No: R1106658

Mr. Cory Repta
GeoSyntec Consultants
130 Research Lane
Suite 2
Guelph, ON N1G 5G3
CANADA

Laboratory Results for: ESTCP PED LC34 11/22/11/ TR0272A

Dear Mr. Repta:

Enclosed are the results of the sample(s) submitted to our laboratory on November 23, 2011. For your reference, these analyses have been assigned our service request number **R1106658**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7471. You may also contact me via email at KBunker@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Karen Bunker
Project Manager

Client:	Geosyntec Consultants	**Service Request No.:**	R1106658
Project:	ESTCP PED LC34/ TR0272 11/22/11	**Date Received:**	11/23/11
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Two (2) water samples were collected by the client on 11/22/11 and were received for analysis at Columbia Analytical Services from 11/10/11 via a national courier The samples were received at a cooler temperature of. 3.2°C within the guidelines of 0-6°C. No bottle breakage or vial headspace was noted upon sample receipt.

Volatile Organic Compounds GC & GC/MS

Two (2) water samples were analyzed for a client specific list of Volatile Organics by Method 8260C and RSK 175.

Initial Calibration Criteria was met for all samples. The 8260C Continuing Calibration Verification (CCV) standard exceeded 20% difference for Acetone on 11/25/11. All detected concentrations for this compound in samples associated with this CCV should be considered as estimated.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. The Laboratory Control Samples (LCS) recoveries were all within QC limits. All Relative Percent Difference (RPD) calculations were acceptable.

Samples required dilutions in order to bring hits within the calibration range of the standards. For samples with hits above the range, the sample is then repeated at the appropriate dilution for the hit. The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

All Volatile Organic samples were analyzed within 7 days from collection, the holding time for unpreserved vials, which are required for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample.

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "I", estimated.

The Laboratory Method Blanks were free from contamination.

No other analytical or QC problems were encountered.

Extractable Organics

Two (2) samples were analyzed for Organic Acids by HPLC.

Initial and Continuing Calibration Criteria was met for all samples.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. The Laboratory Control Samples (LCS) and Duplicate Laboratory Control Sample (DLCS) recoveries were all within QC limit. All Relative Percent Difference (RPD) calculations were acceptable.

Approved by _____ **Date** 12/9/11

The Laboratory Method Blanks were free from contamination.

No other analytical or QC problems were encountered.

Inorganic Parameters

Two (2) water samples were analyzed for TOC by method 9060A, Alkalinity by method SM 2320B, Sulfide by method SM 4500-S2-F and Bromide, Iodide, Chloride, Nitrate, and Sulfate by IC method 300.0 and Nitrite by method 353.2. Two (2) water samples were analyzed for dissolved metals by ICP method 6010C. These soluble metals were filtered in the laboratory upon receipt of the samples.

All initial and continuing calibration criteria were met for these analyses.

Batch QC is included in the report. All LCS recoveries were within acceptance limits. The LCS and LCSD for Sulfide were within QC limits. The Relative Percent Difference (RPD) calculation was acceptable.

All samples were analyzed within holding times for these analyses.

All Laboratory Method Blanks were free from contamination.

No problems were encountered during the analysis of these samples.

Approved by _____ **Date** 12/9/4

CASE NARRATIVE

This report contains analytical results for the following samples:
Service Request Number: R1106658

Lab ID	Client ID
R1106658-001	LC34-RW0007-038.5-20111122
R1106658-002	LC34-RW0007-038.5-20111122 Dissolved
R1106658-003	LC34-RW0008-052.0-20111122
R1106658-004	LC34-RW0008-052.0-20111122 Dissolved

Florida DEP Data Qualifiers

B	Results based upon colony counts outside the acceptable range.
D	Measurement was made in the field.
H	Value based on field kit determination; results may not be accurate.
i	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J	Estimated value (one of the following reasons is discussed in the project case narrative). 1. The result may be inaccurate because the surrogate recovery limits have been exceeded. 2. No known quality control criteria exists for the component. 3. The reported value failed to meet the established quality control criteria for either precision or accuracy. 4. The sample matrix interfered with the ability to make any accurate determination (e.g., primary and confirmation results show greater than 40% RPD). 5. The data is questionable because of improper laboratory or field protocols (e.g., GC/MS Tune did not meet method criteria).
K	Off scale low. The value is less than the lowest calibration standard but greater than the method reporting limit (MRL).
L	Off scale high. The analyte is above the upper limit of the linear calibration range.
M	The MDL/MRL has been elevated because the analyte could not be accurately quantified due to matrix interference.
N	Presumptive evidence of the analyte. Confirmation was not performed.
Q	Sample held beyond the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample.
Z	Too many colonies were present (TNTC). The numeric value represents the filtration volume.

January 04, 2012 Service Request No: R1107094

Mr. Cory Repta
GeoSyntec Consultants
130 Research Lane
Suite 2
Guelph, ON N1G 5G3
CANADA

Laboratory Results for: ESTCP PED LC34 TR0272A 12/15/11

Dear Mr. Repta:

Enclosed are the results of the sample(s) submitted to our laboratory on December 16, 2011. For your reference, these analyses have been assigned our service request number **R1107094**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7471. You may also contact me via email at KBunker@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Karen Bunker
Project Manager

Client:	Geosyntec Consultants	**Service Request No.:**	R1107094
Project:	ESTCP PED LC34/ TR0272 12/15/11	**Date Received:**	12/16/11
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Two (2) water samples were collected by the client on 12/15/11 and were received for analysis at Columbia Analytical Services from 12/16/11 via a national courier The samples were received at a cooler temperature of 1.2°C within the guidelines of 0-6°C. No bottle breakage or vial headspace was noted upon sample receipt.

Volatile Organic Compounds GC/MS

Two (2) water samples were analyzed for a client specific list of Volatile Organics by Method 8260C.

Initial and Continuing Calibration Criteria was met for all samples.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. The Laboratory Control Samples (LCS) and LCS Duplicate (LSCD) recoveries were all within QC limits. All Relative Percent Difference (RPD) calculations were acceptable.

Samples required dilutions in order to bring hits within the calibration range of the standards. For samples with hits above the range, the sample is then repeated at the appropriate dilution for the hit. The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

All Volatile Organic samples were analyzed within 7 days from collection, the holding time for unpreserved vials, which are required for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample.

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "I", estimated.

The Laboratory Method Blanks were free from contamination.

No other analytical or QC problems were encountered.

Volatile Organics GC

Two (2) samples were analyzed for Organic Acids by HPLC and GC Method RSK-175.

Initial and Continuing Calibration Criteria was met for all samples.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. The Laboratory Control Samples (LCS) and LCS Duplicate (LSCD recoveries were all within QC limit. All Relative Percent Difference (RPD) calculations were acceptable.

Samples required dilutions in order to bring hits within the calibration range of the standards. For samples with hits above the range, the sample is then repeated at the appropriate dilution for the hit. The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

Approved by Karen Burchett **Date** 1/4/12

All Volatile Organic samples were analyzed within 7 days from collection, the holding time for unpreserved vials, which are required for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample. Organic Acids were analyzed within the proper holding time.

The Laboratory Method Blanks were free from contamination.

No other analytical or QC problems were encountered.

Inorganic Parameters

Two (2) water samples were analyzed for TOC by method 9060A, Alkalinity by method SM 2320B, Sulfide by method SM 4500-S2-F and Bromide, Iodide, Chloride, Nitrate, and Sulfate by IC method 300.0 and Nitrite by method 353.2. Two (2) water samples were analyzed for dissolved metals by ICP method 6010C. These soluble metals were filtered in the laboratory upon receipt of the samples.

All initial and continuing calibration criteria were met for these analyses.

Batch QC is included in the report. All LCS recoveries were within acceptance limits. The LCS and LCSD for Sulfide were within QC limits. The Relative Percent Difference (RPD) calculation was acceptable.

All samples were analyzed within holding times for these analyses.

All Laboratory Method Blanks were free from contamination.

No problems were encountered during the analysis of these samples.

Approved by Karen Burdett Date 1/4/12

CASE NARRATIVE

This report contains analytical results for the following samples:
Service Request Number: R1107094

Lab ID	Client ID
R1107094-001	LC34-RW0007-038.5-20111215
R1107094-002	LC34-RW0007-038.5-20111215 Dissolved
R1107094-003	LC34-RW0008-052.0-20111215
R1107094-004	LC34-RW0008-052.0-20111215 Dissolved

Florida DEP Data Qualifiers

B	Results based upon colony counts outside the acceptable range.
D	Measurement was made in the field.
H	Value based on field kit determination; results may not be accurate.
i	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J	Estimated value (one of the following reasons is discussed in the project case narrative). 1. The result may be inaccurate because the surrogate recovery limits have been exceeded. 2. No known quality control criteria exists for the component. 3. The reported value failed to meet the established quality control criteria for either precision or accuracy. 4. The sample matrix interfered with the ability to make any accurate determination (e.g., primary and confirmation results show greater than 40% RPD). 5. The data is questionable because of improper laboratory or field protocols (e.g., GC/MS Tune did not meet method criteria).
K	Off scale low. The value is less than the lowest calibration standard but greater than the method reporting limit (MRL).
L	Off scale high. The analyte is above the upper limit of the linear calibration range.
M	The MDL/MRL has been elevated because the analyte could not be accurately quantified due to matrix interference.
N	Presumptive evidence of the analyte. Confirmation was not performed.
Q	Sample held beyond the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample.
Z	Too many colonies were present (TNTC). The numeric value represents the filtration volume.

January 23, 2012 Service Request No: R1200102

Mr. Cory Repta
GeoSyntec Consultants
130 Research Lane
Suite 2
Guelph, ON N1G 5G3
CANADA

Laboratory Results for: ESTCP PED LC34 TR0272A

Dear Mr. Repta:

Enclosed are the results of the sample(s) submitted to our laboratory on January 6, 2012. For your reference, these analyses have been assigned our service request number **R1200102**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7471. You may also contact me via email at KBunker@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc.

Karen Bunker
Project Manager

Client:	Geosyntec Consultants	**Service Request No.:**	R1200102
Project:	ESTCP PED LC34/ TR0272 1/5/12	**Date Received:**	1/6/12
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Two (2) water samples and one (1) Trip Blank were collected by the client on 1/5/12 and were received for analysis at Columbia Analytical Services on 1/6/12 via a national courier. The samples were received at a cooler temperature of 3.6°C within the guidelines of 0-6°C. Sample vials received from CAS were preserved with HCL. The client triple rinsed the vials prior to sampling.

Organic Compounds

Two (2) water samples and one (1) Trip Blank were analyzed for a client specific list of Volatile Organics by Method 8260C. Two (2) samples were also analyzed for Organic Acids by HPLC and GC Method RSK-175.

Initial Calibration Criteria was met for all samples for 8260C. The Continuing Calibration Verification (CCV) standard exceeded 20% Difference criteria for Cyclohexane on 1/9/12. All detected concentrations for this compound in samples associated with this CCV should be considered as estimated.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. The Laboratory Control Samples (LCS) and LCS Duplicate (LSCD), (RSK & Organic Acids) recoveries were all within QC limits except for Cyclohexane which was outside limits high on the 1/9/12 and 1/12/12 runs. The exceedences are flagged as "*". All Relative Percent Difference (RPD) calculations were acceptable.

Samples required dilutions in order to bring hits within the calibration range of the standards. For samples with hits above the range, the sample is then repeated at the appropriate dilution for the hit. The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

All Volatile Organic samples were analyzed within 7 days from collection, the holding time for unpreserved vials, which are required for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample. Organic Acids were analyzed within the proper holding time.

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "I", estimated.

The Laboratory Method Blanks were free from contamination.

No other analytical or QC problems were encountered.

Inorganic Parameters

Two (2) water samples were analyzed for Bromide and Iodide by IC method 300.0, dissolved ICP Metals, TOC by method 9060A, Alkalinity by method SM 2320B, Sulfide by method SM 4500-S2-F and Anions: Chloride, Nitrate, Nitrite, and Sulfate by IC method 300.0 The soluble metals were filtered in the laboratory upon receipt of the samples.

All initial and continuing calibration criteria were met for these analyses.

Approved by Dawn Burke **Date** 1/23/12

Batch QC is included in the report. All LCS and LCSD (Sulfide) recoveries were within QC limits.

All samples were analyzed within holding times for these analyses.

All Laboratory Method Blanks were free from contamination.

No other problems were encountered during the analysis of these samples.

Approved by Karen Burke Date 1/23/12

CASE NARRATIVE

This report contains analytical results for the following samples:
Service Request Number: R1200102

Lab ID	Client ID
R1200102-001	LC34-RW0007-038.5-20120105
R1200102-002	LC34-RW0007-038.5-20120105 Dissolved
R1200102-003	LC34-RW0008-052.0-20120105
R1200102-004	LC34-RW0008-052.0-20120105 Dissolved
R1200102-005	LC34-TB-20120105

Florida DEP Data Qualifiers

B	Results based upon colony counts outside the acceptable range.
D	Measurement was made in the field.
H	Value based on field kit determination; results may not be accurate.
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J	Estimated value (one of the following reasons is discussed in the project case narrative). 1. The result may be inaccurate because the surrogate recovery limits have been exceeded. 2. No known quality control criteria exists for the component. 3. The reported value failed to meet the established quality control criteria for either precision or accuracy. 4. The sample matrix interfered with the ability to make any accurate determination (e.g., primary and confirmation results show greater than 40% RPD). 5. The data is questionable because of improper laboratory or field protocols (e.g., GC/MS Tune did not meet method criteria).
K	Off scale low. The value is less than the lowest calibration standard but greater than the method reporting limit (MRL).
L	Off scale high. The analyte is above the upper limit of the linear calibration range.
M	The MDL/MRL has been elevated because the analyte could not be accurately quantified due to matrix interference.
N	Presumptive evidence of the analyte. Confirmation was not performed.
Q	Sample held beyond the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample.
Z	Too many colonies were present (TNTC). The numeric value represents the filtration volume.

Laboratory Results for: ESTCP PED LC34 1/26/12

Dear Mr. Repta:

Enclosed are the results of the sample(s) submitted to our laboratory on January 27, 2012. For your reference, these analyses have been assigned our service request number **R1200577**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7471. You may also contact me via email at KBunker@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc. dba ALS Environmental

CASE NARRATIVE

This report contains analytical results for the following samples:
Service Request Number: R1200577

Lab ID	Client ID
R1200577-001	LC34-RW0007-038.5-20120126
R1200577-002	LC34-RW0007-038.5-20120126 Dissolved
R1200577-003	LC34-RW0008-052.0-20120126
R1200577-004	LC34-RW0008-052.0-20120126 Dissolved
R1200577-005	LC34-TB-20120126

Client:	Geosyntec Consultants	**Service Request No.:**	R1200577
Project:	ESTCP PED LC34/ TR0272 1/26/12	**Date Received:**	1/27/12
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Two (2) water samples and one (1) Trip Blank were collected by the client on 1/26/12 and were received for analysis at Columbia Analytical Services on 1/27/12 via a national courier. The samples were received at a cooler temperature of 3.5°C within the guidelines of 0-6°C.

Organic Compounds

Two (2) water samples and one (1) Trip Blank were analyzed for a client specific list of Volatile Organics by Method 8260C. Two (2) samples were also analyzed for Organic Acids by HPLC and GC Method RSK-175.

Initial Calibration Criteria was met for all samples for 8260C. The Continuing Calibration Verification (CCV) standard exceeded 20% Difference criteria for Carbon Disulfide on the 1/30/12 analytical run and n-Butanol, Bromoform, Dibromochloromethane and n-butyl acetate on the 2/1/12 run. All detected concentrations for these compound in samples associated with these CCV's should be considered as estimated.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. The Laboratory Control Samples (LCS) and LCS Duplicates (LCSD for Organic Acids only) recoveries were all within QC limits. The Relative Percent Difference (RPD) calculations were acceptable.

Samples required dilutions in order to bring hits within the calibration range of the standards. For samples with hits above the range, the sample is then repeated at the appropriate dilution for the hit. The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

All Volatile Organic samples were analyzed within 7 days from collection, the holding time for unpreserved vials, which are required for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample. Organic Acids were analyzed within the proper holding time.

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "I", estimated.

The Laboratory Method Blanks were free from contamination.

No other analytical or QC problems were encountered.

Inorganic Parameters

Two (2) water samples were analyzed for Bromide and Iodide by IC method 300.0, dissolved ICP Metals, TOC by method 9060A, Alkalinity by method SM 2320B, Sulfide by method SM 4500-S2-F and Anions: Chloride, Nitrate, Nitrite, and Sulfate by IC method 300.0 The soluble metals were filtered in the laboratory upon receipt of the samples.

All initial and continuing calibration criteria were met for these analyses.

Approved by Karen Barlow Date 2/14/12

Batch QC is included in the report. All LCS and LCSD (Sulfide) recoveries were within QC limits.

All samples were analyzed within holding times for these analyses.

All Laboratory Method Blanks were free from contamination.

No other problems were encountered during the analysis of these samples.

Approved by Raven Beeler Date 2/14/12

DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Florida DEP Data Qualifiers

B	Results based upon colony counts outside the acceptable range.
D	Measurement was made in the field.
H	Value based on field kit determination; results may not be accurate.
i	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J	Estimated value (one of the following reasons is discussed in the project case narrative). 1. The result may be inaccurate because the surrogate recovery limits have been exceeded. 2. No known quality control criteria exists for the component. 3. The reported value failed to meet the established quality control criteria for either precision or accuracy. 4. The sample matrix interfered with the ability to make any accurate determination (e.g., primary and confirmation results show greater than 40% RPD). 5. The data is questionable because of improper laboratory or field protocols (e.g., GC/MS Tune did not meet method criteria).
K	Off scale low. The value is less than the lowest calibration standard but greater than the method reporting limit (MRL).
L	Off scale high. The analyte is above the upper limit of the linear calibration range.
M	The MDL/MRL has been elevated because the analyte could not be accurately quantified due to matrix interference.
N	Presumptive evidence of the analyte. Confirmation was not performed.
Q	Sample held beyond the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample.
Z	Too many colonies were present (TNTC). The numeric value represents the filtration volume.

Cooler Receipt And Preservation Check Form

Project/Client GeoSyntec Folder Number R1200577

Cooler received on 1/27/12 by: AHH COURIER: CAS UPS (FEDEX) VELOCITY CLIENT

1.	Were custody seals on outside of cooler?	(YES)	NO			
2.	Were custody papers properly filled out (ink, signed, etc.)?	(YES)	NO			
3.	Did all bottles arrive in good condition (unbroken)?	YES	(NO) *			
4.	Did VOA vials, Alkalinity, or Sulfide have significant* air bubbles?	YES	(NO)	N/A		
5.	Were **Ice** or **Ice packs** present?	(YES)	NO			
6.	Where did the bottles originate?	(CAS/ROC)	CLIENT			
7.	Temperature of cooler(s) upon receipt:	3.5°				
	Is the temperature within 0° - 6° C?:	(Yes)	Yes	Yes	Yes	Yes
	If No, Explain Below	No	No	No	No	No

Date/Time Temperatures Taken: 1/27/12 1010

Thermometer ID (IR GUN#3) / IR GUN#4 Reading From: (Temp Blank) / Sample Bottle

If out of Temperature, note packing/ice condition, Client Approval to Run Samples: _____

PC Secondary Review: KB 1/27/12

Cooler Breakdown: Date: 1/27/12 Time: 1226 by: _____

1.	Were all bottle labels complete (*i.e.* analysis, preservation, etc.)?	(YES)	NO
2.	Did all bottle labels and tags agree with custody papers?	(YES)	NO
3.	Were correct containers used for the tests indicated?	(YES)	NO
4.	Air Samples: Cassettes / Tubes Intact Canisters Pressurized Tedlar® Bags Inflated		(N/A)

Explain any discrepancies: _____

pH	Reagent	YES	NO	Lot Received	Exp	Sample ID	Vol. Added	Lot Added	Final pH
≥12	NaOH	X		WC1031316	10/12				
≤2	HNO_3								
≤2	H_2SO_4			WC1031A3	11/12				
<4	$NaHSO_4$								
Residual Chlorine (-)	For TCN Phenol and 522			If present, contact PM to add ascorbic acid Or sodium sulfite (522)					
	$Na_2S_2O_3$	-	-						
	Zn Aceta	-	-	WC1032105	10/12				
	HCl	*	*						

*Not to be tested before analysis – pH tested and recorded by VOAs or GenChem on a separate worksheet

Yes = All samples OK

No = Samples were preserved at lab as listed

PM OK to Adjust: _____

Bottle lot numbers: 121211-2xx, 061711-22, 1-194-001

Notes:

* Percent *Dehalococcoides* (Dhc) in microbial population. This value is calculated by dividing the number of Dhc 16S ribosomal ribonucleic acid (rRNA) gene copies by the total number of bacteria as estimated by the mass of DNA extracted from the sample. Range represents normal variation in Dhc enumeration.

** Based on quantification of Dhc 16S rRNA gene copies. Dhc are generally reported to contain one 16S rRNA gene copy per cell; therefore, this number is often interpreted to represent the number of Dhc cells present in the sample.

J The associated value is an estimated quantity between the method detection limit and quantitation limit.
U Not detected, associated value is the quantification limit.
B Analyte was also detected in the method blank.
NA Not applicable as *Dehalococcoides* not detected and/or quantifiable DNA not extracted from the sample.
I Sample inhibited the test reaction based on inability to PCR amplify extracted DNA with universal primers.

March 01, 2012 Service Request No: R1201033

Mr. Cory Repta
GeoSyntec Consultants
130 Research Lane
Suite 2
Guelph, ON N1G 5G3
CANADA

Laboratory Results for: LC34 Soils 2/13/12/ TR0272

Dear Mr. Repta:

Enclosed are the results of the sample(s) submitted to our laboratory on February 15, 2012. For your reference, these analyses have been assigned our service request number **R1201033**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7471. You may also contact me via email at KBunker@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc. dba ALS Environmental

Karen Bunker
Project Manager

Client:	Geosyntec Consultants	**Service Request No.:**	R1201033
Project:	ESTCP PED LC34/ TR0272 2/13/12	**Date Received:**	2/15/12
Sample Matrix:	Soil		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Twenty-two (22) soil samples and one (1) Trip Blank were collected by the client on 2/13/12 in Terracore samplers and were received for analysis at Columbia Analytical Services on 2/15/12 via a national courier. The samples were received at a cooler temperature range of 2.1-5.7°C within the guidelines of 0-6°C. The sample ID's were revised as per a client email on 2/15/12.

Organic Compounds

Twenty-two (22) water samples and one (1) Trip Blank were analyzed for a client specific list of Volatile Organics by Method 8260C. All soils were analyzed for % Solids in order to report all data on a dry weight basis.

Initial Calibration Criteria was met for all samples for 8260C. The Continuing Calibration Verification (CCV) standard exceeded 20% Difference criteria for the following:

n-Butyl Acetate on the 2/23/12 run,
Acetone, Bromomethane, and Chloroform on the 2/24/12 (analysis lot #281378) analytical run,
Bromoform, Bromomethane, and n-Butyl Acetate on the 2/24/12 (analysis lot# 281373) run,
Acetone and Bromomethane on the 2/25/12 (analysis lot # 281419) run,
Bromomethane on the 2/25/12 (analysis lot #281447) run,
1,1-Dichloroethene, MEK, Carbon Disulfide, Chloroform, Dichloromethane on the 2/27/12.

All detected concentrations for these compound in samples associated with these CCV's should be considered as estimated.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. The Laboratory Control Samples (LCS) and LCS Duplicates (LCSD for Organic Acids only) recoveries were all within QC limits except for the following:
Tetrachloroethene on the LCS from 2/24/12,
and 1,2-Dichloropropane on the LCS from 2/25/12.
The Relative Percent Difference (RPD) calculations were acceptable except for the following:
n-Butanol, 2-Hexanone, 4-Methyl-2-pentanone, Bromoform and Chloroethane on the 2/25/12 LCS/LCSD.
All exceedences have been flagged as "*".

Samples required dilutions in order to bring hits within the calibration range of the standards. For samples with hits above the range, the sample is then repeated at the appropriate dilution for the hit. The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

Sample location LC34-DPT045.5-20120213 (R1201033-019) was repeated twice at the low level and once at as a medium level. The results varied between runs. Rather than merge the sample data, all runs have been reported by adding on the low level results as 2 additional locations to report: LC34-DPT045.4-20120213 (R1201033-024) and LC34-DPT045.6-20120213 (R1201033-025). The depths were altered slightly as per client instructions.

All Volatile Organic samples were analyzed within 7 days from collection, the holding time for unpreserved vials, which are required for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample.

Approved by Karen Beeler **Date** 3/30/12

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "I", estimated.

The Laboratory Method Blanks were free from contamination except for low level hits for MEK on the 2/23/12, 2/24/12 (analysis lot # 281378), and 2/25/12 blanks, Acetone on the 2/24/12 (analysis lot #281378) and Bromomethane on the 2/27/12 blank. Any affected sample hits would be flagged as "B".

No other analytical or QC problems were encountered.

Approved by Karen Beard **Date** 3/30/12

Florida DEP Data Qualifiers

B	Results based upon colony counts outside the acceptable range.
D	Measurement was made in the field.
H	Value based on field kit determination; results may not be accurate.
i	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J	Estimated value (one of the following reasons is discussed in the project case narrative). 1. The result may be inaccurate because the surrogate recovery limits have been exceeded. 2. No known quality control criteria exists for the component. 3. The reported value failed to meet the established quality control criteria for either precision or accuracy. 4. The sample matrix interfered with the ability to make any accurate determination (e.g., primary and confirmation results show greater than 40% RPD). 5. The data is questionable because of improper laboratory or field protocols (e.g., GC/MS Tune did not meet method criteria).
K	Off scale low. The value is less than the lowest calibration standard but greater than the method reporting limit (MRL).
L	Off scale high. The analyte is above the upper limit of the linear calibration range.
M	The MDL/MRL has been elevated because the analyte could not be accurately quantified due to matrix interference.
N	Presumptive evidence of the analyte. Confirmation was not performed.
Q	Sample held beyond the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample.
Z	Too many colonies were present (TNTC). The numeric value represents the filtration volume.

Project: LC34 Soils 2/13/12/ TR0272
Sample Matrix: Soil

Service Request: R1201033
Date Analyzed: 2/24/12

Lab Control Sample Summary
Volatile Organic Compounds by GC/MS

Analytical Method: 8260C

Units: µg/Kg
Basis: Dry

Analysis Lot: 281378

	Lab Control Sample RQ1202004-03			Duplicate Lab Control Sample RQ1202004-04					
Analyte Name	**Result**	**Spike Amount**	**% Rec**	**Result**	**Spike Amount**	**% Rec**	**% Rec Limits**	**RPD**	**RPD Limit**
1,1,1-Trichloroethane (TCA)	17.4	20.0	87	16.6	20.0	83	68 - 129	5	30

Laboratory Results for: ESTCP PED LC34 2/14-16/12/ TR0272A

Dear Mr. Repta:

Enclosed are the results of the sample(s) submitted to our laboratory between February 15, 2012 and February 17, 2012. For your reference, these analyses have been assigned our service request number **R1201031**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7471. You may also contact me via email at KBunker@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc. dba ALS Environmental

Client:	Geosyntec Consultants	**Service Request No.:**	R1201031
Project:	ESTCP PED LC34/ TR0272A 2/14-16/12	**Date Received:**	2/15-17/12
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Forty-eight (48) water samples were collected by the client over the period 2/14-16/12 and were received for analysis at Columbia Analytical Services from 2/15-17/12 via a national courier The samples were received at a cooler temperature range of 2.1-5.7°C within the guidelines of 0-6°C. A Trip Blank vial was received broken in the 2/16/12 shipment. Bubbles were noted in some sample aliquots. All are recorded on the Cooler Receipt and Preservation Check Forms immediately following the Chains of Custody forms. The time recorded on the chain of custody for location LC34-BW0001E-052.5-20120216 was incorrect. The correction was corrected on the chain of custody and initialed and dated as per the client's email from 2/17/12.

Volatile Organic Compounds GC/MS

Thirty-eight (38) water samples were analyzed for a client specific list of Volatile Organics by Method 8260C.

Initial and Continuing Calibration Criteria was met for all samples except for %D which was outside the 20% limit for the following compounds:
Acetone on the 2/20/12 run Analysis Lot: 280656,
N-Butanol and Methylcyclohexane on the 2/20/12 run Analysis Lot : 280661,
Acetone and Cyclohexane on the 2/21/12 run,
2-Butanone, Acetone, Chloromethane, Cyclohexane, Dichlorodifluoromethane, Methylcyclohexane, on the 2/22/12 run,
and Acetone and Dichlorodifluoromethane on the 2/23/12 run.

Any hits for these compounds on the associated runs should be considered as estimated.

All surrogate recoveries were within acceptance limits.

Site QC was requested and included in the report for locations LC34-IW0071D-I-040.5-20120215 and LC34-IW0002D1-052.5-20120216 (R1201031-029 and -052 respectively). QC was not requested but is included for location LC34-1DW-185539-2012-216D (R1201031-057) All Matrix Spike (MS) and Matrix Spike Duplicate (MSD) recoveries were within QC acceptance limits. The Laboratory Control Samples (LCS) recoveries were all within QC limits. All Relative Percent Difference (RPD) calculations were acceptable.

Samples required dilutions in order to bring hits within the calibration range of the standards. For samples with hits above the range, the sample is then repeated at the appropriate dilution for the hit. The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

All Volatile Organic samples were analyzed within 7 days from collection, the holding time for unpreserved vials, which are required for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample.

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "I", estimated.

The Laboratory Method Blanks were free from contamination except for a low level hit of 1,2,4-Trichlorobenzene on the 2/23/12 blank.

Approved by Karen Burdes Date 3/6/12

No other analytical or QC problems were encountered.

Volatile Organics GC

Twenty-five (25) samples were analyzed for Organic Acids by HPLC and GC Method RSK-175.

Initial and Continuing Calibration Criteria was met for all samples.

All surrogate recoveries were within acceptance limits.

Site QC is included in the report for locations LC34-BW0002A-024.5-20120215 (R1201031-017) for Organic Acids and LC34-BW0003D-045.5-20120215 (R1201031-022) for RSK-175. All Matrix Spike (MS) and Matrix Spike Duplicate (MSD) recoveries were within acceptance limits. The Acetic Acid was spiked too low to be accurately determined. The recoveries for this compound have been flagged as "#". The Laboratory Control Samples (LCS) and LCS Duplicate (LSCD) recoveries were all within QC limit. All Relative Percent Difference (RPD) calculations were acceptable.

Samples required dilutions in order to bring hits within the calibration range of the standards. For samples with hits above the range, the sample is then repeated at the appropriate dilution for the hit. The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

All Volatile Organic samples were analyzed within 7 days from collection, the holding time for unpreserved vials, which are required for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample. Organic Acids were analyzed within the proper holding time.

The Laboratory Method Blanks were free from contamination.

No other analytical or QC problems were encountered.

Inorganic Parameters

Thirty-one (31) water samples were analyzed for TOC by method 9060A, fourteen (14) waters for Alkalinity by method SM 2320B, Sulfide by method SM 4500-S2-F and Bromide, Iodide, Chloride, Nitrate, and Sulfate by IC method 300.0 and Nitrite by method 353.2. Thirteen (13) water samples were analyzed for dissolved metals by ICP method 6010C. These soluble metals were filtered in the laboratory upon receipt of the samples.

All initial and continuing calibration criteria were met for these analyses.

Site QC is included in the report for all requested locations except for Nitrite. An alternate location was analyzed for this parameter due to a laboratory error. Also, Sulfide had insufficient volume for full QC, 3 bottles are required and only 2 were received, so a replicate was analyzed for the requested location. Additional Site QC is also included for Alkalinity and some of the anion compounds. All Matrix Spike and Matrix Spike Duplicate recoveries were within acceptance limits except for Chloride which was outside limits low for both samples. The recoveries have been flagged as "*". All Laboratory Control Sample (LCS) and LCS Duplicate recoveries were within QC limits. The Relative Percent Difference (RPD) calculations were also acceptable for all compounds.

All samples were analyzed within holding times for these analyses.

All Laboratory Method Blanks were free from contamination.

No problems were encountered during the analysis of these samples.

Approved by Karen Burke Date 3/6/12

CASE NARRATIVE

This report contains analytical results for the following samples:

Florida DEP Data Qualifiers

B	Results based upon colony counts outside the acceptable range.
D	Measurement was made in the field.
H	Value based on field kit determination; results may not be accurate.
i	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J	Estimated value (one of the following reasons is discussed in the project case narrative). 1. The result may be inaccurate because the surrogate recovery limits have been exceeded. 2. No known quality control criteria exists for the component. 3. The reported value failed to meet the established quality control criteria for either precision or accuracy. 4. The sample matrix interfered with the ability to make any accurate determination (e.g., primary and confirmation results show greater than 40% RPD). 5. The data is questionable because of improper laboratory or field protocols (e.g., GC/MS Tune did not meet method criteria).
K	Off scale low. The value is less than the lowest calibration standard but greater than the method reporting limit (MRL).
L	Off scale high. The analyte is above the upper limit of the linear calibration range.
M	The MDL/MRL has been elevated because the analyte could not be accurately quantified due to matrix interference.
N	Presumptive evidence of the analyte. Confirmation was not performed.
Q	Sample held beyond the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample.
Z	Too many colonies were present (TNTC). The numeric value represents the filtration volume.

Cooler Receipt and Preservation Check Form

Project/Client Geosyntec Folder Number R1201031

Cooler received on 2/15/12 by: RD **COURIER:** ALS UPS FEDEX VELOCITY CLIENT

1.	Were custody seals on outside of cooler?			YES	NO	
2.	Were custody papers properly filled out (ink, signed, etc.)?			YES	NO	
3.	Did all bottles arrive in good condition (unbroken)?			YES	NO	
4.	Did VOA vials, Alkalinity, or Sulfide have significant* air bubbles?			YES	NO	N/A
5.	Were **Ice** or **Ice packs** present?			YES	NO	
6.	Where did the bottles originate?			ALS/ROC,	CLIENT	
7.	Temperature of cooler(s) upon receipt:	5.7°	3.2°	4.6°	2.1°	____
	Is the temperature within 0° - 6° C?:	Yes	Yes	Yes	Yes	Yes
	If No, Explain Below	No	No	No	No	No

Date/Time Temperatures Taken: 2/15/12 0952

Thermometer ID: IR GUN#3 / IR GUN#4 Reading From: Temp Blank / Sample Bottle

If out of Temperature, note packing/ice condition &Client Approval to Run Samples: ____

All Samples held in storage location R-002 by RD on 2/15/12 at 1000

5035 samples placed in storage location F-01 by RD on 2/15/12 at 1000

PC Secondary Review: KB 2/15/12

Cooler Breakdown: Date: 2/15/12 Time: 1250 by: RD

1.	Were all bottle labels complete (*i.e.* analysis, preservation, etc.)?	YES	NO
2.	Did all bottle labels and tags agree with custody papers?	YES	NO
3.	Were correct containers used for the tests indicated?	YES	NO
4.	Air Samples: Cassettes / Tubes Intact Canisters Pressurized Tedlar® Bags Inflated		N/A

Explain any discrepancies: Did not receive LC34-FD-20120214-01 TOC vial

pH	Reagent	YES	NO	Lot Received	Exp	Sample ID	Vol. Added	Lot Added	Final pH
≥12	NaOH			WC103138C	1/13				
≤2	HNO_3								
≤2	H_2SO_4			WC103193G	1/13				
<4	$NaHSO_4$								
Residual Chlorine (-)	For TCN Phenol and 522			If present, contact PM to add ascorbic acid Or sodium sulfite (522)

April 02, 2012 Service Request No: R1201733

Mr. Cory Repta
GeoSyntec Consultants
130 Research Lane
Suite 2
Guelph, ON N1G 5G3
CANADA

Laboratory Results for: ESTCP PED LC34 FO0510B 3/15/12

Dear Mr. Repta:

Enclosed are the results of the sample(s) submitted to our laboratory on March 16, 2012. For your reference, these analyses have been assigned our service request number **R1201733**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7471. You may also contact me via email at KBunker@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc. dba ALS Environmental

Karen Bunker
Project Manager

Client:	Geosyntec Consultants	**Service Request No.:**	R1201733
Project:	ESTCP PED LC34/ TR0272A 3/15/12	**Date Received:**	3/16/12
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Two (2) water samples were collected by the client on 3/15/12 and were received for analysis at Columbia Analytical Services on 3/16/12 via a national courier The samples were received at a cooler temperature of 1.5°C within the guidelines of 0-6°C. A Trip Blank was received but not analyzed as per client instructions.

Volatile Organic Compounds GC/MS

Two (2) water samples were analyzed for a client specific list of Volatile Organics by Method 8260C.

Initial and Continuing Calibration Criteria was met for all samples except for %D which was outside the 20% limit for N-Butanol on the 3/22/12 run. Any hits for this compound on the associated run should be considered as estimated.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. The Laboratory Control Samples (LCS) recoveries were all within QC limits.

Samples required dilutions in order to bring hits within the calibration range of the standards.

All Volatile Organic samples were analyzed within 7 days from collection, the holding time for unpreserved vials, which are required for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample.

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "I", estimated.

The Laboratory Method Blanks were free from contamination.

No other analytical or QC problems were encountered.

Approved by Karen Beenhee **Date** 3/21/12

CASE NARRATIVE

This report contains analytical results for the following samples:
Service Request Number: R1201733

Lab ID	Client ID
R1201733-001	LC34-RW0007-038.5-20120315
R1201733-002	LC34-RW0008-052.0-20120315

Florida DEP Data Qualifiers

B	Results based upon colony counts outside the acceptable range.
D	Measurement was made in the field.
H	Value based on field kit determination; results may not be accurate.
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J	Estimated value (one of the following reasons is discussed in the project case narrative). 1. The result may be inaccurate because the surrogate recovery limits have been exceeded. 2. No known quality control criteria exists for the component. 3. The reported value failed to meet the established quality control criteria for either precision or accuracy. 4. The sample matrix interfered with the ability to make any accurate determination (e.g., primary and confirmation results show greater than 40% RPD). 5. The data is questionable because of improper laboratory or field protocols (e.g., GC/MS Tune did not meet method criteria).
K	Off scale low. The value is less than the lowest calibration standard but greater than the method reporting limit (MRL).
L	Off scale high. The analyte is above the upper limit of the linear calibration range.
M	The MDL/MRL has been elevated because the analyte could not be accurately quantified due to matrix interference.
N	Presumptive evidence of the analyte. Confirmation was not performed.
Q	Sample held beyond the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample.
Z	Too many colonies were present (TNTC). The numeric value represents the filtration volume.

Mr. Cory Repta
GeoSyntec Consultants
130 Research Lane
Suite 2
Guelph, ON N1G 5G3
CANADA

Laboratory Results for: ESTCP PED LC34 FO552B (4/19/12)

Dear Mr. Repta:

Enclosed are the results of the sample(s) submitted to our laboratory on April 20, 2012. For your reference, these analyses have been assigned our service request number **R1202512**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7471. You may also contact me via email at KBunker@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc. dba ALS Environmental

PROJECT SOLUTIONS

CASE NARRATIVE

This report contains analytical results for the following samples:
Service Request Number: R1202512

Lab ID	Client ID
R1202512-001	LC34-RW0007-038.5-20120419
R1202512-002	LC34-RW0008-052.0-20120419

Client:	Geosyntec Consultants	**Service Request No.:**	R1202512
Project:	ESTCP PED LC34/ FO552B (4/19/12)	**Date Received:**	4/20/12
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Two (2) water samples were collected by the client on 4/19/12 and were received for analysis at Columbia Analytical Services from 4/20/12 via a national courier The samples were received at a cooler temperature of 7.1°C slightly above the guidelines of 0-6°C. Ice was present in the cooler with the samples and the temperature was noted on the sample confirmation. The chain of custody forms were consistent with the samples received.

Volatile Organic Compounds GC/MS

Thirty-eight (38) water samples were analyzed for a client specific list of Volatile Organics by Method 8260C.

Initial and Continuing Calibration Criteria was met for all samples except for %D which was outside the 20% limit for the following compounds: Methyl Acetate, MTBE, and 2-Butanone on the 4/24/12 run. Any hits for these compounds on the associated runs should be considered as estimated.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. The Laboratory Control Samples (LCS) recoveries were all within QC limits.

Samples required dilutions in order to bring hits within the calibration range of the standards. For samples with hits above the range, the sample is then repeated at the appropriate dilution for the hit. The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

All Volatile Organic samples were analyzed within 7 days from collection, the holding time for unpreserved vials, which are required for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample.

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "I", estimated.

The Laboratory Method Blanks were free from contamination except for a low level hit of Bromomethane on the 4/24/12 blank. No data was affected.

No other analytical or QC problems were encountered.

Approved by Karen Burdick **Date** 5/7/12

Florida DEP Data Qualifiers

B	Results based upon colony counts outside the acceptable range.
D	Measurement was made in the field.
H	Value based on field kit determination; results may not be accurate.
i	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J	Estimated value (one of the following reasons is discussed in the project case narrative). 1. The result may be inaccurate because the surrogate recovery limits have been exceeded. 2. No known quality control criteria exists for the component. 3. The reported value failed to meet the established quality control criteria for either precision or accuracy. 4. The sample matrix interfered with the ability to make any accurate determination (e.g., primary and confirmation results show greater than 40% RPD). 5. The data is questionable because of improper laboratory or field protocols (e.g., GC/MS Tune did not meet method criteria).
K	Off scale low. The value is less than the lowest calibration standard but greater than the method reporting limit (MRL).
L	Off scale high. The analyte is above the upper limit of the linear calibration range.
M	The MDL/MRL has been elevated because the analyte could not be accurately quantified due to matrix interference.
N	Presumptive evidence of the analyte. Confirmation was not performed.
Q	Sample held beyond the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample.
Z	Too many colonies were present (TNTC). The numeric value represents the filtration volume.

Laboratory Results for: ESTCP PED LC34 FO0552B 5/17/12

Dear Mr. Repta:

Enclosed are the results of the sample(s) submitted to our laboratory on May 18, 2012. For your reference, these analyses have been assigned our service request number **R1203201**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7471. You may also contact me via email at KBunker@caslab.com.

Respectfully submitted,

Columbia Analytical Services, Inc. dba ALS Environmental

Karen Bunker
Project Manager

Client:	Geosyntec Consultants	**Service Request No.:**	R1203201
Project:	ESTCP PED LC34/ FO552B (5/17/12)	**Date Received:**	5/18/12
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Two (2) water samples were collected by the client on 5/17/12 and were received for analysis at Columbia Analytical Services from 5/18/12 via a national courier The samples were received at a cooler temperature of 4.1°C within the guidelines of 0-6°C. The chain of custody forms were consistent with the samples received.

Volatile Organic Compounds GC/MS

Two (2) water samples were analyzed for a client specific list of Volatile Organics by Method 8260C.

Initial and Continuing Calibration Criteria was met for all samples except for %D which was outside the 20% limit for the following compounds: Bromoform, Chloromethane, and Dichlorodifluoromethane on the 5/21/12 run and 2-Butanone, Acetone, and Dichlorodifluoromethane on the 5/22/12 analytical run. Any hits for these compounds on the associated runs should be considered as estimated.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. The Laboratory Control Samples (LCS) recoveries were all within QC limits.

Samples required dilutions in order to bring hits within the calibration range of the standards. For samples with hits above the range, the sample is then repeated at the appropriate dilution for the hit. The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

All Volatile Organic samples were analyzed within 7 days from collection, the holding time for unpreserved vials, which are required for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample.

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "I", estimated.

The Laboratory Method Blanks were free from contamination except for a low level hit of 1,2,4-Trichlorobenzene, Bromomethane, Dichloromethane on the 5/22/12 (analysis 292528) blank and 1,2,4-Trichlorobenzene and Bromomethane (analysis 292718). No data was affected.

No other analytical or QC problems were encountered.

Approved by Karen Burke **Date** 6/5/12

CASE NARRATIVE

This report contains analytical results for the following samples:
Service Request Number: R1203201

Lab ID	Client ID
R1203201-001	LC34-RW0007-038.5-20120517
R1203201-002	LC34-RW0008-052.0-20120517

Florida DEP Data Qualifiers

B	Results based upon colony counts outside the acceptable range.
D	Measurement was made in the field.
H	Value based on field kit determination; results may not be accurate.
i	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J	Estimated value (one of the following reasons is discussed in the project case narrative). 1. The result may be inaccurate because the surrogate recovery limits have been exceeded. 2. No known quality control criteria exists for the component. 3. The reported value failed to meet the established quality control criteria for either precision or accuracy. 4. The sample matrix interfered with the ability to make any accurate determination (e.g., primary and confirmation results show greater than 40% RPD). 5. The data is questionable because of improper laboratory or field protocols (e.g., GC/MS Tune did not meet method criteria).
K	Off scale low. The value is less than the lowest calibration standard but greater than the method reporting limit (MRL).
L	Off scale high. The analyte is above the upper limit of the linear calibration range.
M	The MDL/MRL has been elevated because the analyte could not be accurately quantified due to matrix interference.
N	Presumptive evidence of the analyte. Confirmation was not performed.
Q	Sample held beyond the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample.
Z	Too many colonies were present (TNTC). The numeric value represents the filtration volume.

ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Laboratory Results for: ESTCP PED LC34 FO0552B 6/26/12

Dear Dr. Daprato:

Enclosed are the results of the sample(s) submitted to our laboratory on June 27, 2012. For your reference, these analyses have been assigned our service request number **R1204087**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7471. You may also contact me via email at Karen.Bunker@alsglobal.com.

Respectfully submitted,

Columbia Analytical Services, Inc. dba ALS Environmental

Karen Bunker
Project Manager

Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Twenty-four (24) water samples were collected by the client on 6/26/12 and were received for analysis at Columbia Analytical Services on 6/27/12 via a national courier The samples were received at a cooler temperature range of 2.0-2.6°C within the guidelines of 0-6°C. The chain of custody forms were consistent with the samples received. The

Volatile Organic Compounds GC/MS

Twenty-four (24) water samples were analyzed for a client specific list of Volatile Organics by GC/MS Method 8260C. Eighteen (18) samples were also analyzed for GC Method RSK-175.

The minimum response factor for Tetrachloroethene was not met in the daily CCV on 6/29/12 (analysis lot #s 2981036 and 298544) runs. The ICAL's were acceptable. The data has been considered acceptable since the MRL's have been verified by the low standard in the calibration.

Continuing Calibration Criteria was met for all samples except for %D which was outside the 20% limit for the following compounds:

1,2-Dibromo-3-chloropropane (23.3%) and Bromoform (30.1%) on the 6/29/12 run,

1,1,2,2-Tetrachloroethane (21.3%), 1,2-Dibromo-3-chloropropane (32.4%), n-Butanol (22.1%), 2-Hexanone (21.9%), Bromoform (36.1%), Dichlorodifluoromethane (23.0%), and n-Butyl Acetate (24.5%) on the 6/30/12 run, and

Acetone (-22.4%), Carbon Disulfide (26.4%), and Dichlorodifluoromethane (23.6%) on the 7/2/12 run.

Any hits for these compounds on the associated runs should be considered as estimated, however only the compound N-Butanol was detected in location -009 and this sample was repeated at a dilution on 7/2/12.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. The Laboratory Control Samples (LCS) and LCS Duplicate (LCSD) recoveries were all within QC limits except for Bromoform (LCS only) and 1,1,2,2-Tetrachloroethane (LCS only) on the 6/29/12, and Carbon Disulfide on the 7/2/12 run.

Samples required dilutions in order to bring hits within the calibration range of the standards. For samples with hits above the range, the sample is then repeated at the appropriate dilution for the hit. The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

All Volatile Organic samples were analyzed within 7 days from collection, the holding time for unpreserved vials, which are required for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample.

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "I", estimated.

The Laboratory Method Blanks were free from contamination except for a low level hit of 1,24-Trichlorobenzene on the 6/29/12, 6/30/12, and 7/2/12 blanks. Any affected data has been flagged as "B".

No other analytical or QC problems were encountered.

Approved by Karen Burke **Date** 7/13/12

Eighteen (18) water samples were analyzed for TOC analysis by method 9060A.

All initial and continuing calibration criteria were met.

Batch QC is included in the report. All Laboratory Control Sample (LCS) recoveries were within acceptance limits.

All Method Blanks were free from contamination.

All samples were analyzed within the proper holding time.

No problems were encountered during the analysis of these samples.

Approved by Karen Beard **Date** 7/13/12

CASE NARRATIVE

This report contains analytical results for the following samples:

Florida DEP Data Qualifiers

B	Results based upon colony counts outside the acceptable range.
D	Measurement was made in the field.
H	Value based on field kit determination; results may not be accurate.
i	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J	Estimated value (one of the following reasons is discussed in the project case narrative). 1. The result may be inaccurate because the surrogate recovery limits have been exceeded. 2. No known quality control criteria exists for the component. 3. The reported value failed to meet the established quality control criteria for either precision or accuracy. 4. The sample matrix interfered with the ability to make any accurate determination (e.g., primary and confirmation results show greater than 40% RPD). 5. The data is questionable because of improper laboratory or field protocols (e.g., GC/MS Tune did not meet method criteria).
K	Off scale low. The value is less than the lowest calibration standard but greater than the method reporting limit (MRL).
L	Off scale high. The analyte is above the upper limit of the linear calibration range.
M	The MDL/MRL has been elevated because the analyte could not be accurately quantified due to matrix interference.
N	Presumptive evidence of the analyte. Confirmation was not performed.
Q	Sample held beyond the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample.
Z	Too many colonies were present (TNTC). The numeric value represents the filtration volume.

Laboratory Results for: ESTCP PED LC34 FO0552B 6/27/12

Dear Dr. Daprato:

Enclosed are the results of the sample(s) submitted to our laboratory on June 29, 2012. For your reference, these analyses have been assigned our service request number **R1204170**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7471. You may also contact me via email at Karen.Bunker@alsglobal.com.

Respectfully submitted,

Columbia Analytical Services, Inc. dba ALS Environmental

Karen Bunker

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Seven (7) water samples were collected by the client on 6/27/12 and were received for analysis at Columbia Analytical Services on 6/29/12 via a national courier The samples were received at a cooler temperature of 10.7°C, outside the guidelines of 0-6°C. The client was notified via the Sample Confirmation and permission was given to proceed with the analyses. The chain of custody forms were consistent with the samples received. Bubbles were noted in 1 vial each of 2 different locations as noted on the Cooler Receipt and Preservation Check Form.

Volatile Organic Compounds GC/MS

Seven (7) water samples were analyzed for a client specific list of Volatile Organics by GC/MS Method 8260C. Six (6) samples were also analyzed for GC Method RSK-175.

The Initial Calibration and Continuing Calibration criteria was met for all samples.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. The Laboratory Control Samples (LCS) and LCS Duplicate (LCSD) recoveries were all within QC limits.

Samples required dilutions in order to bring hits within the calibration range of the standards. For samples with hits above the range, the sample is then repeated at the appropriate dilution for the hit. The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

All Volatile Organic samples were analyzed within 7 days from collection, the holding time for unpreserved vials, which are required for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample.

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "I", estimated.

The Laboratory Method Blanks were free from contamination.

No other analytical or QC problems were encountered.

Inorganics

Six (6) water samples were analyzed for TOC analysis by method 9060A.

All initial and continuing calibration criteria were met.

Batch QC is included in the report. All Laboratory Control Sample (LCS) recoveries were within acceptance limits.

All Method Blanks were free from contamination.

All samples were analyzed within the proper holding time.

No problems were encountered during the analysis of these samples.

Approved by Karen Burke **Date** 7/17/12

CASE NARRATIVE

This report contains analytical results for the following samples:
Service Request Number: R1204170

Lab ID	Client ID
R1204170-001	LC34-BW0003A-024.5-20120627
R1204170-002	LC34-BW0003B-031.5-20120627
R1204170-003	LC34-BW0003C-038.5-20120627
R1204170-004	LC34-BW0003D-045.5-20120627
R1204170-005	LC34-BW0003E-052.5-20120627
R1204170-006	LC34-BW0003F-059.5-20120627
R1204170-007	LC34-1DW-188680-20120627

Florida DEP Data Qualifiers

B	Results based upon colony counts outside the acceptable range.
D	Measurement was made in the field.
H	Value based on field kit determination; results may not be accurate.
i	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J	Estimated value (one of the following reasons is discussed in the project case narrative). 1. The result may be inaccurate because the surrogate recovery limits have been exceeded. 2. No known quality control criteria exists for the component. 3. The reported value failed to meet the established quality control criteria for either precision or accuracy. 4. The sample matrix interfered with the ability to make any accurate determination (e.g., primary and confirmation results show greater than 40% RPD). 5. The data is questionable because of improper laboratory or field protocols (e.g., GC/MS Tune did not meet method criteria).
K	Off scale low. The value is less than the lowest calibration standard but greater than the method reporting limit (MRL).
L	Off scale high. The analyte is above the upper limit of the linear calibration range.
M	The MDL/MRL has been elevated because the analyte could not be accurately quantified due to matrix interference.
N	Presumptive evidence of the analyte. Confirmation was not performed.
Q	Sample held beyond the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample.
Z	Too many colonies were present (TNTC). The numeric value represents the filtration volume.

Cooler Receipt and Preservation Check Form

Project/Client GeoSyntec Folder Number R1204170

Cooler received on 6/29/12 by: AWH COURIER: ALS UPS (FEDEX) VELOCITY CLIENT

1.	Were custody seals on outside of cooler?	YES	(NO)			
2.	Were custody papers properly filled out (ink, signed, etc.)?	(YES)	NO			
3.	Did all bottles arrive in good condition (unbroken)?	(YES)	NO			
4.	Did VOA vials, Alkalinity, or Sulfide have significant* air bubbles?	(YES)	NO	N/A		
5.	Were **Ice** or **Ice packs** present?	(YES)	NO			
6.	Where did the bottles originate?	(ALS/ROC)	CLIENT			
7.	Temperature of cooler(s) upon receipt:	10.7°				
	Is the temperature within 0° - 6° C?:	Yes	Yes	Yes	Yes	Yes
	If No, Explain Below	(No)	No	No	No	No

Date/Time Temperatures Taken: 6/29/12 0935

Thermometer ID: IR GUN#3 / (IR GUN#4) Reading From: Temp Blank (Sample Bottle)

If out of Temperature, note packing/ice condition &Client Approval to Run Samples:

All Samples held in storage location R-002 by AWH on 6/29/12 at 0940

5035 samples placed in storage location _____ by _____ on _____ at _____

PC Secondary Review: 6/29/12 CB client notified on sample confirm

Cooler Breakdown: Date: 6/29/12 Time: 1200 by: (AH)

1.	Were all bottle labels complete (*i.e.* analysis, preservation, etc.)?	(YES)	NO
2.	Did all bottle labels and tags agree with custody papers?	(YES)	NO
3.	Were correct containers used for the tests indicated?	(YES)	NO
4.	Air Samples: Cassettes / Tubes Intact Canisters Pressurized Tedlar® Bags Inflated		(N/A)

Explain any discrepancies: _____

pH	Reagent	YES	NO	Lot Received	Exp	Sample ID	Vol. Added	Lot Added	Final pH
≥12	NaOH								
≤2	HNO_3								
≤2	H_2SO_4			WC 112015C	6/13				
<4	$NaHSO_4$								
Residual Chlorine (-)	For TCN Phenol and 522			If present, contact PM to add ascorbic acid Or sodium sulfite (522)					
	$Na_2S_2O_3$	-	-						
	Zn Aceta	-	-						
	HCl	*	*	4111060	5/13				

*Not to be tested before analysis – pH tested and recorded by VOAs or GenChem on a separate worksheet

Yes = All samples OK

No = Samples were preserved at lab as listed

PM OK to Adjust: _____

Bottle lot numbers: 2-059-001, 2-059-003

Notes:

* Percent *Dehalococcoides* (Dhc) in microbial population. This value is calculated by dividing the number of Dhc 16S ribosomal ribonucleic acid (rRNA) gene copies by the total number of bacteria as estimated by the mass of DNA extracted from the sample. Range represents normal variation in Dhc enumeration.

** Based on quantification of Dhc 16S rRNA gene copies. Dhc are generally reported to contain one 16S rRNA gene copy per cell; therefore, this number is often interpreted to represent the number of Dhc cells present in the sample.

J The associated value is an estimated quantity between the method detection limit and quantitation limit.
U Not detected, associated value is the quantification limit.
B Analyte was also detected in the method blank.
NA Not applicable as *Dehalococcoides* not detected and/or quantifiable DNA not extracted from the sample.
I Sample inhibited the test reaction based on inability to PCR amplify extracted DNA with universal primers.

Laboratory Results for: ESTCP PED C34 FO0552B 7/19/12

Dear Dr. Daprato:

Enclosed are the results of the sample(s) submitted to our laboratory on July 20, 2012. For your reference, these analyses have been assigned our service request number **R1204678**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7471. You may also contact me via email at Karen.Bunker@alsglobal.com.

Respectfully submitted,

Columbia Analytical Services, Inc. dba ALS Environmental

Karen Bunker
Project Manager

Client:	Geosyntec Consultants	**Service Request No.:**	R1204678
Project:	ESTCP PED LC34/ FO552B (7/19/12)	**Date Received:**	7/20/12
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Two (2) water samples were collected by the client on 7/19/12 and were received for analysis at Columbia Analytical Services on 7/20/12 via a national courier The samples were received at a cooler temperature of 3.3°C within the guidelines of 0-6°C. The chain of custody forms were consistent with the samples received. One (1) vial for each of the samples contained headspace as noted on the Cooler Receipt and Preservation form. Two (2) vials for each of the samples were acceptable

Volatile Organic Compounds GC/MS

Two (2) water samples were analyzed for a client specific list of Volatile Organics by GC/MS Method 8260C.

The initial calibration criteria was met for these samples. The Continuing Calibration Verification (CCV) %D for 1,2-Dichloroethane was outside the 20% limit on the 7/24/12 run. Any hits for this compound on the associated run should be considered as estimated, however the samples were non-detect for this compound and therefore unaffected.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. The Laboratory Control Samples (LCS) and LCS Duplicate (LCSD) recoveries were all within QC limits.

The samples required dilutions in order to bring hits within the calibration range of the standards. For samples with hits above the range, the sample is then repeated at the appropriate dilution for the hit. The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

All Volatile Organic samples were analyzed within 7 days from collection, the holding time for unpreserved vials, which are required for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample.

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "I", estimated.

The Laboratory Method Blanks were free from contamination.

No other analytical or QC problems were encountered.

Approved by Karen Burden **Date** 8/31/12

CASE NARRATIVE

This report contains analytical results for the following samples:
Service Request Number: R1204678

Lab ID	Client ID
R1204678-001	LC34-RW0007-038.5-20120719
R1204678-002	LC34-RW0008-052.0-20120719

Florida DEP Data Qualifiers

B	Results based upon colony counts outside the acceptable range.
D	Measurement was made in the field.
H	Value based on field kit determination; results may not be accurate.
i	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J	Estimated value (one of the following reasons is discussed in the project case narrative). 1. The result may be inaccurate because the surrogate recovery limits have been exceeded. 2. No known quality control criteria exists for the component. 3. The reported value failed to meet the established quality control criteria for either precision or accuracy. 4. The sample matrix interfered with the ability to make any accurate determination (e.g., primary and confirmation results show greater than 40% RPD). 5. The data is questionable because of improper laboratory or field protocols (e.g., GC/MS Tune did not meet method criteria).
K	Off scale low. The value is less than the lowest calibration standard but greater than the method reporting limit (MRL).
L	Off scale high. The analyte is above the upper limit of the linear calibration range.
M	The MDL/MRL has been elevated because the analyte could not be accurately quantified due to matrix interference.
N	Presumptive evidence of the analyte. Confirmation was not performed.
Q	Sample held beyond the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample.
Z	Too many colonies were present (TNTC). The numeric value represents the filtration volume.

Cooler Receipt and Preservation Check Form

Project/Client Geosyntec Folder Number R1204678

Cooler received on 7-20-12 by: KE COURIER: ALS UPS (FEDEX) VELOCITY CLIENT

1.	Were custody seals on outside of cooler?	YES	(NO)			
2.	Were custody papers properly filled out (ink, signed, etc.)?	(YES)	NO			
3.	Did all bottles arrive in good condition (unbroken)?	(YES)	NO			
4.	Did VOA vials, Alkalinity, or Sulfide have significant* air bubbles?	(YES) *	NO	N/A		
5.	Were Ice or Ice packs present?	(YES)	NO			
6.	Where did the bottles originate?	(ALS/ROC)	CLIENT			
7.	Temperature of cooler(s) upon receipt:	3.3°				
	Is the temperature within 0° - 6° C?:	(Yes)	Yes	Yes	Yes	Yes
	If No, Explain Below	No	No	No	No	No

Date/Time Temperatures Taken: 7-20-12 @ 9:38

Thermometer ID: (IR GUN#3) / IR GUN#4 Reading From: Temp Blank / (Sample Bottle)

If out of Temperature, note packing/ice condition &Client Approval to Run Samples:

All Samples held in storage location R-002 by KE on 7-20-12 at 9:40

5035 samples placed in storage location _____ by _____ on _____ at _____

PC Secondary Review: KB 7/20/12

Cooler Breakdown: Date: 7/20/12 Time: 1216 by: DR

1.	Were all bottle labels complete (*i.e.* analysis, preservation, etc.)?	(YES)	NO
2.	Did all bottle labels and tags agree with custody papers?	(YES)	NO
3.	Were correct containers used for the tests indicated?	(YES)	NO
4.	Air Samples: Cassettes / Tubes Intact Canisters Pressurized Tedlar® Bags Inflated		(N/A)

Explain any discrepancies: _____

pH	Reagent	YES	NO	Lot Received *	Exp	Sample ID	Vol. Added	Lot Added	Final pH
≥12	NaOH								
≤2	HNO_3								
≤2	H_2SO_4								
<4	$NaHSO_4$								
Residual Chlorine (-)	For TCN Phenol and 522			If present, contact PM to add ascorbic acid Or sodium sulfite (522)					
	$Na_2S_2O_3$	-	-						
	Zn Aceta	-	-						
	HCl	*	*						

*Not to be tested before analysis – pH tested and recorded by VOAs or GenChem on a separate worksheet

Yes = All samples OK

No = Samples were preserved at lab as listed

PM OK to Adjust: _____

Bottle lot numbers: 8-059-02, H-194-001

Other Comments:

* RW0007, and RW0008 each have one vial with significant headspace KE 7-20-12

PC Secondary Review: KB 8/3/12

*significant air bubbles: VOA > 5-6 mm . WC > 1 in. diameter

Laboratory Results for: ESTCP PED LC34 FO0552B 8/16/12

Dear Dr. Daprato:

Enclosed are the results of the sample(s) submitted to our laboratory on August 17, 2012. For your reference, these analyses have been assigned our service request number **R1205418**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7471. You may also contact me via email at Karen.Bunker@alsglobal.com.

Respectfully submitted,

Columbia Analytical Services, Inc. dba ALS Environmental

Karen Bunker
Project Manager

Client:	Geosyntec Consultants	**Service Request No.:**	R1205418
Project:	ESTCP PED LC34/ FO0552B (8/16/12)	**Date Received:**	8/17/12
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Two (2) water samples were collected by the client on 8/16/12 and were received for analysis at Columbia Analytical Services on 8/17/12 via a national courier The samples were received at a cooler temperature of 4.5°C within the guidelines of 0-6°C. The chain of custody forms were consistent with the samples received.

Volatile Organic Compounds GC/MS

Two (2) water samples were analyzed for a client specific list of Volatile Organics by GC/MS Method 8260C.

The initial calibration criteria was met for these samples. The Continuing Calibration Verification (CCV) did not meet the minimum response factor for Trichloroethene on 8/21/12 and 8/22/12. All data is considered acceptable as the MRL has been verified by the low standard in the calibration.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. The Laboratory Control Samples (LCS) and LCS Duplicate (LCSD) recoveries were all within QC limits.

The samples required dilutions in order to bring hits within the calibration range of the standards. For samples with hits above the range, the sample is then repeated at the appropriate dilution for the hit. The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

All Volatile Organic samples were analyzed within 7 days from collection, the holding time for unpreserved vials, which are required for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample.

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "I", estimated.

The Laboratory Method Blanks from 8/22/12 contained a low level hit of Bromomethane and Chloromethane and have been flagged with a "J". No data was affected.

No other analytical or QC problems were encountered.

Approved by _____ **Date** 8/31/12

CASE NARRATIVE

This report contains analytical results for the following samples:
Service Request Number: R1205418

Lab ID	Client ID
R1205418-001	LC34-RW0007-038.5-20120816
R1205418-002	LC34-RW0008-052.0-20120816

Florida DEP Data Qualifiers

B Results based upon colony counts outside the acceptable range.

D Measurement was made in the field.

H Value based on field kit determination; results may not be accurate.

I The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

J Estimated value (one of the following reasons is discussed in the project case narrative).
1. The result may be inaccurate because the surrogate recovery limits have been exceeded.
2. No known quality control criteria exists for the component.
3. The reported value failed to meet the established quality control criteria for either precision or accuracy.
4. The sample matrix interfered with the ability to make any accurate determination (e.g., primary and confirmation results show greater than 40% RPD).
5. The data is questionable because of improper laboratory or field protocols (e.g., GC/MS Tune did not meet method criteria).

K Off scale low. The value is less than the lowest calibration standard but greater than the method reporting limit (MRL).

L Off scale high. The analyte is above the upper limit of the linear calibration range.

M The MDL/MRL has been elevated because the analyte could not be accurately quantified due to matrix interference.

N Presumptive evidence of the analyte. Confirmation was not performed.

Q Sample held beyond the accepted holding time.

T Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only.

U Indicates that the compound was analyzed for but not detected.

V Indicates that the analyte was detected in both the sample and the associated method blank.

Y The laboratory analysis was from an improperly preserved sample.

Z Too many colonies were present (TNTC). The numeric value represents the filtration volume.

Cooler Receipt and Preservation Check Form

Project/Client GeoSyntec Folder Number R2053418

Cooler received on 8/17/12 by: AHH COURIER: ALS UPS (FEDEX) VELOCITY CLIENT

1.	Were custody seals on outside of cooler?	(YES)	NO			
2.	Were custody papers properly filled out (ink, signed, etc.)?	(YES)	NO			
3.	Did all bottles arrive in good condition (unbroken)?	(YES)	NO			
4.	Did VOA vials, Alkalinity, or Sulfide have significant* air bubbles?	YES	(NO)	N/A		
5.	Were Ice or Ice packs present?	(YES)	NO			
6.	Where did the bottles originate?	(ALS/ROC)	CLIENT			
7.	Temperature of cooler(s) upon receipt:	4.5°				
	Is the temperature within 0° - 6° C?:	(Yes)	Yes	Yes	Yes	Yes
	If No, Explain Below	No	No	No	No	No

Date/Time Temperatures Taken: 8/17/12 0937

Thermometer ID: (IR GUN#3) / IR GUN#4 Reading From: Temp Blank / (Sample Bottle)

If out of Temperature, note packing/ice condition & Client Approval to Run Samples:

All Samples held in storage location R-002 by AHH on 8/17/12 at 0939

5035 samples placed in storage location _____ by _____ on _____ at _____

PC Secondary Review: [illegible] 8/17/12

Cooler Breakdown: Date: 8/17/12 Time: 1340 by: AHH

1.	Were all bottle labels complete (*i.e.* analysis, preservation, etc.)?	(YES)	NO
2.	Did all bottle labels and tags agree with custody papers?	(YES)	NO
3.	Were correct containers used for the tests indicated?	(YES)	NO
4.	Air Samples: Cassettes / Tubes Intact Canisters Pressurized Tedlar® Bags Inflated		(N/A)

Explain any discrepancies: _____

pH	Reagent	YES	NO	Lot Received	Exp	Sample ID	Vol. Added	Lot Added	Final pH
≥12	NaOH								
≤2	HNO_3								
≤2	H_2SO_4								
<4	$NaHSO_4$								
Residual Chlorine (-)	For TCN Phenol and 522			If present, contact PM to add ascorbic acid Or sodium sulfite (522)					
	$Na_2S_2O_3$	-	-						
	Zn Aceta	-	-						
	HCl	*	*	covered by client label AHH 8/17/12					

*Not to be tested before analysis – pH tested and recorded by VOAs or GenChem on a separate worksheet

Yes = All samples OK

No = Samples were preserved at lab as listed

PM OK to Adjust: _____

Bottle lot numbers: covered by client label

Other Comments:

PC Secondary Review: [signature]

*significant air bubbles: VOA > 5-6 mm : WC >1 in. diameter

Houston, TX 77077

Laboratory Results for: ESTCP PED LC34 FO0552B

Dear Dr. Daprato:

Enclosed are the results of the sample(s) submitted to our laboratory on September 12, 2012. For your reference, these analyses have been assigned our service request number **R1206035**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7471. You may also contact me via email at Karen.Bunker@alsglobal.com.

Respectfully submitted,

Columbia Analytical Services, Inc. dba ALS Environmental

Karen Bunker
Project Manager

Client:	Geosyntec Consultants	**Service Request No.:**	R1206035
Project:	ESTCP PED LC34/ FO552B (9/11/12)	**Date Received:**	9/12/12
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Eight (8) water samples were collected by the client on 9/11/12 and were received for analysis at Columbia Analytical Services on 7/20/12 via a national courier The samples were received at a cooler temperature of 3.3°C within the guidelines of 0-6°C. The chain of custody forms were consistent with the samples received.

Volatile Organic Compounds GC/MS

Eight (8) water samples were analyzed for a client specific list of Volatile Organics by GC/MS Method 8260C and Dissolved Gases by GC method RSK-175.

The initial calibration criteria was met for these samples. The Continuing Calibration Verification (CCV) %D for Bromomethane was outside the 20% limit on the 9/13/12 run. Any hits for this compound on the associated run should be considered as estimated, however the samples were non-detect for this compound and therefore unaffected.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. The Laboratory Control Samples (LCS) and LCS Duplicate (LCSD) recoveries were all within QC limits.

The samples required dilutions in order to bring hits within the calibration range of the standards. For samples with hits above the range, the sample is then repeated at the appropriate dilution for the hit. The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

All Volatile Organic samples were analyzed within 7 days from collection, the holding time for unpreserved vials, which are required for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample.

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "I", estimated.

The Laboratory Method Blanks were free from contamination except for 1,2,4-Trichlorobenzene and Bromomethane on the 9/13/12 and 9/17/12 8260C runs. Affected data is flagged as "V".

No other analytical or QC problems were encountered.

Approved by Karen Beebe **Date** 9/27/12

Inorganic Parameters

Eight (8) samples were analyzed for TOC by method 9060A. The average of 4 runs are reported for each sample.

All Initial and Continuing Calibration criteria was met.

Batch QC is included in the report. All Laboratory Control Sample (LCS) recoveries were acceptable.

The samples were run within holding time.

No problems were encountered during the analysis of these samples.

Approved by Karen Burke **Date** 9/27/12

CASE NARRATIVE

This report contains analytical results for the following samples:
Service Request Number: R1206035

Florida DEP Data Qualifiers

B	Results based upon colony counts outside the acceptable range.
D	Measurement was made in the field.
H	Value based on field kit determination; results may not be accurate.
i	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J	Estimated value (one of the following reasons is discussed in the project case narrative). 1. The result may be inaccurate because the surrogate recovery limits have been exceeded. 2. No known quality control criteria exists for the component. 3. The reported value failed to meet the established quality control criteria for either precision or accuracy. 4. The sample matrix interfered with the ability to make any accurate determination (e.g., primary and confirmation results show greater than 40% RPD). 5. The data is questionable because of improper laboratory or field protocols (e.g., GC/MS Tune did not meet method criteria).
K	Off scale low. The value is less than the lowest calibration standard but greater than the method reporting limit (MRL).
L	Off scale high. The analyte is above the upper limit of the linear calibration range.
M	The MDL/MRL has been elevated because the analyte could not be accurately quantified due to matrix interference.
N	Presumptive evidence of the analyte. Confirmation was not performed.
Q	Sample held beyond the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample.
Z	Too many colonies were present (TNTC). The numeric value represents the filtration volume.

Laboratory Results for: ESTCP PED LC34 9/13/12

Dear Dr. Daprato:

Enclosed are the results of the sample(s) submitted to our laboratory on September 14, 2012. For your reference, these analyses have been assigned our service request number **R1206126**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7471. You may also contact me via email at Karen.Bunker@alsglobal.com.

Respectfully submitted,

Columbia Analytical Services, Inc. dba ALS Environmental

Karen Bunker
Project Manager

Client:	Geosyntec Consultants	**Service Request No.:**	R1206126
Project:	ESTCP PED LC34/ FO552B (9/13/12)	**Date Received:**	9/14/12
Sample Matrix:	Water		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Sixteen (16) water samples were collected by the client on 9/13/12 and were received for analysis at Columbia Analytical Services on 9/14/12 via a national courier The samples were received at a cooler temperature range of 5.8-5.9°C within the guidelines of 0-6°C. The chain of custody forms were consistent with the samples received. Some bubbles were noted in vials on the Cooler Receipt and Preservation Form.

Volatile Organic Compounds GC/MS

Sixteen (16) water samples were analyzed for a client specific list of Volatile Organics by GC/MS Method 8260C and Dissolved Gases by GC method RSK-175.

The minimum response factor for Acetone was not met in the ICV from 9/17/12 and Trichloroethene on the 9/18/12 run. The data has been considered acceptable since the MRL's have been verified by the low standard in the calibration.

The Continuing Calibration Verification (CCV) %D for 1,2,4-Trichlorobenzene was outside the 20% limit on the 9/17/12 run and Dichlorodifluoromethane on the 9/18/12 run. Any hits for these compounds on the associated runs should be considered as estimated, however the samples were non-detect for this compound and therefore unaffected.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. The Laboratory Control Samples (LCS) and LCS Duplicate (LCSD) recoveries were all within QC limits except for Methyl Tert-Butyl Ether (LCS only) on the 9/18/12 8260C run. The recovery has been flagged as "*".

The samples required dilutions in order to bring hits within the calibration range of the standards. For samples with hits above the range, the sample is then repeated at the appropriate dilution for the hit. The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

All Volatile Organic samples were analyzed within 7 days from collection, the holding time for unpreserved vials, which are required for this project. All vials are checked after analysis to verify the pH in order to maintain the integrity of the sample.

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "I", estimated.

The primary and secondary standards expired on 8/31/12 for the RSK-175 analysis. New standards had been ordered well before the expiration dates, however, they did not arrive until 9/25/12. All samples were analyzed within the proper holding time for the analysis, prior to the receipt of the new standards. Gas standards have a 1 year expiration date as per the vendor. No significant degradation was noted over the year. All CCV's, LCS's, MS and MSD recoveries were acceptable. The data has been reported.

The Laboratory Method Blanks were free from contamination.

No other analytical or QC problems were encountered.

Approved by Karen Burdick **Date** 10/1/12

Inorganic Parameters

Sixteen (16) samples were analyzed for TOC by method 9060A. The average of 4 runs are reported for each sample.

All Initial and Continuing Calibration criteria was met.

Batch QC is included in the report. All Laboratory Control Sample (LCS) recoveries were acceptable.

The samples were run within holding time.

No problems were encountered during the analysis of these samples.

Approved by Karen Beecher **Date** 10/1/12

CASE NARRATIVE

This report contains analytical results for the following samples:

Florida DEP Data Qualifiers

B	Results based upon colony counts outside the acceptable range.
D	Measurement was made in the field.
H	Value based on field kit determination; results may not be accurate.
i	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J	Estimated value (one of the following reasons is discussed in the project case narrative). 1. The result may be inaccurate because the surrogate recovery limits have been exceeded. 2. No known quality control criteria exists for the component. 3. The reported value failed to meet the established quality control criteria for either precision or accuracy. 4. The sample matrix interfered with the ability to make any accurate determination (e.g., primary and confirmation results show greater than 40% RPD). 5. The data is questionable because of improper laboratory or field protocols (e.g., GC/MS Tune did not meet method criteria).
K	Off scale low. The value is less than the lowest calibration standard but greater than the method reporting limit (MRL).
L	Off scale high. The analyte is above the upper limit of the linear calibration range.
M	The MDL/MRL has been elevated because the analyte could not be accurately quantified due to matrix interference.
N	Presumptive evidence of the analyte. Confirmation was not performed.
Q	Sample held beyond the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample.
Z	Too many colonies were present (TNTC). The numeric value represents the filtration volume.

SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Client:	GeoSyntec Consultants	**Service Request:**	R1206126
Project:	ESTCP PED LC34 9/13/12	**Date Collected:**	9/13/12 1055

Cooler Receipt and Preservation Check Form

Project/Client Aeogates Folder Number R120126

Cooler received on 9/14/12 by: KB COURIER: ALS UPS (FEDEX) VELOCITY CLIENT

1.	Were custody seals on outside of cooler?			YES	(NO)	
2.	Were custody papers properly filled out (ink, signed, etc.)?			(YES)	NO	
3.	Did all bottles arrive in good condition (unbroken)?			(YES)	NO	
4.	Did VOA vials, Alkalinity, or Sulfide have significant* air bubbles?			(YES)	NO	N/A
5.	Were **Ice** or **Ice packs** present?			(YES)	NO	
6.	Where did the bottles originate?			ALS/ROC	(CLIENT)	
7.	Temperature of cooler(s) upon receipt:	5.8	5.9°			
	Is the temperature within 0° - 6° C?:	(Yes)	(Yes)	Yes	Yes	Yes
	If No, Explain Below	~~No~~	No	No	No	No

Date/Time Temperatures Taken: 9/14/12 0940

Thermometer ID: (IR GUN#3) / IR GUN#4 Reading From: Temp Blank / (Sample Bottle)

If out of Temperature, note packing/ice condition &Client Approval to Run Samples:

All Samples held in storage location R-052 by KB on 9/14/12 at 0945

5035 samples placed in storage location _____ by _____ on _____ at _____

PC Secondary Review: KB 9/14/12

Cooler Breakdown: Date: 9/14/12 Time: 1649 by: AHH

1.	Were all bottle labels complete (*i.e.* analysis, preservation, etc.)?	(YES)	NO
2.	Did all bottle labels and tags agree with custody papers?	(YES)	NO
3.	Were correct containers used for the tests indicated?	(YES)	NO
4.	Air Samples: Cassettes / Tubes Intact Canisters Pressurized Tedlar® Bags Inflated		(N/A)

Explain any discrepancies: _____

pH	Reagent	YES	NO	Lot Received *-	Exp	Sample ID	Vol. Added	Lot Added	Final pH
≥12	NaOH								
≤2	HNO_3								
≤2	H_2SO_4			WC U2071A	07/13				
<4	$NaHSO_4$								
Residual Chlorine (-)	For TCN Phenol and 522			If present, contact PM to add ascorbic acid Or sodium sulfite (522)					
	$Na_2S_2O_3$	-	-						
	Zn Aceta	-	-						
	HCl	"	"	4111100	07/13				

*Not to be tested before analysis – pH tested and recorded by VOAs or GenChem on a separate worksheet

Yes = All samples OK

No = Samples were preserved at lab as listed

PM OK to Adjust: _____

Bottle lot numbers: 2-143-002, 2-143-001

Other Comments:

Bubbles: IW0070 (2 vials)
LC 34BW0001 B (2 vials)
RW0007 (2 vials)

PC Secondary Review: KB 10/1/12

*significant air bubbles: VOA > 5-6 mm , WC > 1 in. diameter

LC34-BW0003E-052.5-20120913	DHC-8565	13-Sep-12	Groundwater	0.3 - 0.8 %	2×10^6

Notes:

* Percent *Dehalococcoides* (Dhc) in microbial population. This value is calculated by dividing the number of Dhc 16S ribosomal ribonucleic acid (rRNA) gene copies by the total number of bacteria as estimated by the mass of DNA extracted from the sample. Range represents normal variation in Dhc enumeration.

** Based on quantification of Dhc 16S rRNA gene copies. Dhc are generally reported to contain one 16S rRNA gene copy per cell; therefore, this number is often interpreted to represent the number of Dhc cells present in the sample.

J The associated value is an estimated quantity between the method detection limit and quantitation limit.
U Not detected, associated value is the quantification limit.
B Analyte was also detected in the method blank.
NA Not applicable as *Dehalococcoides* not detected and/or quantifiable DNA not extracted from the sample.
I Sample inhibited the test reaction based on inability to PCR amplify extracted DNA with universal primers.
E Extracted genomic DNA was not detected in sample.

September 27, 2012 Service Request No: R1206036

Dr. Rebecca Daprato
GeoSyntec Consultants
11490 Westheimer
Suite 150
Houston, TX 77077

Laboratory Results for: ESTCP LC34 FO 0552B

Dear Dr. Daprato:

Enclosed are the results of the sample(s) submitted to our laboratory on September 12, 2012. For your reference, these analyses have been assigned our service request number **R1206036**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. The measurement uncertainty of the results included in this report is within that expected when using the prescribed method(s) for analysis of these samples, and represented by Laboratory Control Sample control limits. Any events, such as QC failures, which may add to the uncertainty are explained in the report narrative.

Please contact me if you have any questions. My extension is 7471. You may also contact me via email at Karen.Bunker@alsglobal.com.

Respectfully submitted,

Columbia Analytical Services, Inc. dba ALS Environmental

Karen Bunker
Project Manager

Client:	Geosyntec Consultants	**Service Request No.:**	R1206036
Project:	ESTCP PED LC34/ TR0272 2/13/12	**Date Received:**	9/12/12
Sample Matrix:	Soil		

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Twenty-two (22) soil samples were collected by the client on 9/10-11/12 in Terracore samplers and were received for analysis at Columbia Analytical Services on 9/12/12 via a national courier. The samples were received at a cooler temperature of 2.7°C within the guidelines of 0-6°C. Sample locations LC34-DPT0351-053.0-20120911 (CAS # R1206036-011), LC34-DPT0349-040.0-20120910 (R1206036-013), and LC34-DPT0349-046.5-20120910 (R1206036-016) arrived with liquid in the sample bags indicating possible leakage. However, all samples were able to be screened and analyzed.

Organic Compounds

Twenty-two (22) water samples were analyzed for a client specific list of Volatile Organics by Method 8260C. All soils were analyzed for % Solids in order to report all data on a dry weight basis.

Initial Calibration Criteria was met for all samples for 8260C. The Continuing Calibration Verification (CCV) standard exceeded 20% Difference criteria for Bromomethane and Chloromethane on the 9/14/12 and 9/19/12 analytical runs and Acetone on the 9/20/12. All detected concentrations for these compound in samples associated with these CCV's should be considered as estimated.

All surrogate recoveries were within acceptance limits.

Batch QC is included in the report. The Laboratory Control Samples (LCS) and LCS Duplicates (LCSD for Organic Acids only) recoveries were all within QC limits. All Relative Percent Difference (RPD) calculations were acceptable.

Samples required dilutions in order to bring hits within the calibration range of the standards. For samples with hits above the range, the sample is then repeated at the appropriate dilution for the hit. The sample data is merged and reported with the initial surrogate recoveries as per client requirements for this project.

All samples were analyzed within the proper holding time for the method.

Hits between the Minimum Detection Limit (MDL) and Method Reporting Limit (MRL) are flagged as "I", estimated.

The Laboratory Method Blanks were free from contamination except for a low level hit for Bromomethan on the 9/19/12 method blank. Any affected sample hits would be flagged as "V".

No other analytical or QC problems were encountered.

Approved by Raven Beeler **Date** 9/28/12

CASE NARRATIVE

This report contains analytical results for the following samples:

Florida DEP Data Qualifiers

B	Results based upon colony counts outside the acceptable range.
D	Measurement was made in the field.
H	Value based on field kit determination; results may not be accurate.
i	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
J	Estimated value (one of the following reasons is discussed in the project case narrative). 1. The result may be inaccurate because the surrogate recovery limits have been exceeded. 2. No known quality control criteria exists for the component. 3. The reported value failed to meet the established quality control criteria for either precision or accuracy. 4. The sample matrix interfered with the ability to make any accurate determination (e.g., primary and confirmation results show greater than 40% RPD). 5. The data is questionable because of improper laboratory or field protocols (e.g., GC/MS Tune did not meet method criteria).
K	Off scale low. The value is less than the lowest calibration standard but greater than the method reporting limit (MRL).
L	Off scale high. The analyte is above the upper limit of the linear calibration range.
M	The MDL/MRL has been elevated because the analyte could not be accurately quantified due to matrix interference.
N	Presumptive evidence of the analyte. Confirmation was not performed.
Q	Sample held beyond the accepted holding time.
T	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only.
U	Indicates that the compound was analyzed for but not detected.
V	Indicates that the analyte was detected in both the sample and the associated method blank.
Y	The laboratory analysis was from an improperly preserved sample.
Z	Too many colonies were present (TNTC). The numeric value represents the filtration volume.

trans-1,2-Dichloroethene	16.3	20.0	81	72 - 120
trans-1,3-Dichloropropene	18.1	20.0	91	69 - 127

Results flagged with an asterisk (*) indicate values outside control criteria.
Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

COLUMBIA ANALYTICAL SERVICES, INC.
Now part of the ALS Group
QA/QC Report

Client: GeoSyntec Consultants
Project: ESTCP LC34 FO 0552B
Sample Matrix: Soil

Service Request: R1206036
Date Analyzed: 9/21/12

Lab Control Sample Summary
Volatile Organic Compounds by GC/MS

Analytical Method: 8260C

Units: µg/Kg
Basis: Dry

Analysis Lot: 310599

Analyte Name	Lab Control Sample RQ1211272-02 Result	Spike Amount	% Rec	% Rec Limits
1,1,1-Trichloroethane (TCA)	18.7	20.0	94	67 - 121
1,1,2,2-Tetrachloroethane	21.5	20.0	107	72 - 124
1,1,2-Trichloroethane	20.9	20.0	105	81 - 117
1,1-Dichloroethane (1,1-DCA)	18.9	20.0	94	76 - 124
1,1-Dichloroethene (1,1-DCE)	17.2	20.0	86	67 - 119

Cooler Receipt and Preservation Check Form

Project/Client GeoSyntec Folder Number R1206086

Cooler received on 9/12/12 by: AWH COURIER: ALS UPS (FEDEX) VELOCITY CLIENT

1.	Were custody seals on outside of cooler?	YES	(NO)			
2.	Were custody papers properly filled out (ink, signed, etc.)?	(YES)	NO			
3.	Did all bottles arrive in good condition (unbroken)?	(YES)	NO			
4.	Did VOA vials, Alkalinity, or Sulfide have significant* air bubbles?	YES	NO	(N/A)		
5.	Were **Ice** or **Ice packs** present?	(YES)	NO			
6.	Where did the bottles originate?	(ALS/ROC)	CLIENT			
7.	Temperature of cooler(s) upon receipt:	2.7°				
	Is the temperature within 0° - 6° C?:	(Yes)	Yes	Yes	Yes	Yes
	If No, Explain Below	No	No	No	No	No

Date/Time Temperatures Taken: 9/12/12 1007

Thermometer ID: (IR GUN#3) / IR GUN#4 Reading From: (Temp Blank) / Sample Bottle

If out of Temperature, note packing/ice condition &Client Approval to Run Samples: _____

All Samples held in storage location R-002 by AWH on 9/12/12 at 1013

5035 samples placed in storage location F-005 by AWH on 9/12/12 at 1013

PC Secondary Review: KRS 9/12/12

Cooler Breakdown: Date: 9/12/12 Time: 1428 by: AWH

1.	Were all bottle labels complete (*i.e.* analysis, preservation, etc.)?	(YES)	NO
2.	Did all bottle labels and tags agree with custody papers?	YES	(NO)*
3.	Were correct containers used for the tests indicated?	(YES)	NO
4.	Air Samples: Cassettes / Tubes Intact Canisters Pressurized Tedlar® Bags Inflated		(N/A)

Explain any discrepancies: _____

pH	Reagent	YES	NO	Lot Received **	Exp	Sample ID	Vol. Added	Lot Added	Final pH
≥12	NaOH								
≤2	HNO_3								
≤2	H_2SO_4								
<4	$NaHSO_4$								
Residual Chlorine (-)	For TCN Phenol and 522			If present, contact PM to add ascorbic acid Or sodium sulfite (522)					
	$Na_2S_2O_3$	-	-						
	Zn Aceta	-	-						
	HCl	*	*						

*Not to be tested before analysis – pH tested and recorded by VOAs or GenChem on a separate worksheet

Yes = All samples OK

No = Samples were preserved at lab as listed

PM OK to Adjust: _____

Bottle lot numbers: 06 2512-17

Other Comments:

* Received DPT 351-43.5 not on COC.

PC Secondary Review: KB 9/27/12

*significant air bubbles: VOA > 5-6 mm ; WC ~1 in. diameter
